Mark scheme

June 2022

---

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from [aqa.org.uk](http://aqa.org.uk)

## Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor for the level shows the average performance for the level. There are marks in each level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme.

### Step 1 Determine a level

Start at the lowest level of the mark scheme and use it as a ladder to see whether the answer meets the descriptor for that level. The descriptor for the level indicates the different qualities that might be seen in the student's answer for that level. If it meets the lowest level then go to the next one and decide if it meets this level, and so on, until you have a match between the level descriptor and the answer. With practice and familiarity you will find that for better answers you will be able to quickly skip through the lower levels of the mark scheme.

When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, ie if the response is predominantly level 3 with a small amount of level 4 material it would be placed in level 3 but be awarded a mark near the top of the level because of the level 4 content.

### Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will help. There will be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example.

You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the Indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

To Examiners:

- **When to award '0' (zero) or '-' (hyphen) when inputting marks on CMI+**

A mark of 0 should be awarded where a candidate has attempted a question but failed to write anything creditworthy.

Insert a hyphen when a candidate has not attempted a question, so that eventually the Principal Examiner will be able to distinguish between the two (not attempted/nothing creditworthy) in any statistics.

- This mark scheme contains the correct responses which we believe that candidates are most likely to give. Other valid responses are possible to some questions and should be credited. Examiners should refer responses that are not covered by the mark scheme, but which they deem creditworthy, to a **Team Leader**.

The following annotation is used in the mark scheme:

- ;  
//  
/  
A.  
R.  
NE.  
I.  
DPT.
- means a single mark
- means an alternative response
- means an alternative word or sub-phrase
- means acceptable creditworthy answer
- means reject answer as not creditworthy
- means not enough
- means ignore
- means "Don't penalise twice". In some questions a specific error made by a candidate, if repeated, could result in the loss of more than one mark. The **DPT** label indicates that this mistake should only result in a candidate losing one mark, on the first occasion that the error is made. Provided that the answer remains understandable, subsequent marks should be awarded as if the error was not being repeated.

Examiners are required to assign each of the candidate's responses to the most appropriate level according to **its overall quality**, and then allocate a single mark within the level.

The response lists some issues that are likely to focus on only <b>two or three</b> aspects (lossy, ethical, legal, cultural) of the question. Some of the points made will have been expanded upon but are likely to be lacking in clear examples or may not wholly relate to the points being made.	4–6	1	There is no evidence that a line of reasoning has been followed. Answers in this level may identify a point relating to the use of lossy compression but this part of the question may not be addressed at all. The response will attempt to identify some issues raised by the question; points are not likely to be expanded upon but where they are, the examples will be irrelevant or not relate to the points being made.	1–3	12
Level	Description	Mark Range																
4	A line of reasoning has been followed to produce a coherent, relevant, substantiated and logically structured response. Answers in this level will demonstrate a clear justification of the use of lossy compression and will show a developed awareness of how the benefits of lossy compression are related to one another. The response covers <b>all four</b> aspects (lossy, ethical, legal, cultural) of the question. A range of the points made will have been expanded upon using clear examples and references to real world implications.	10–12																
3	A line of reasoning has been followed to produce a coherent, relevant, substantiated and logically structured response. Answers in this level will address the use of lossy compression but there may not always be a clearly demonstrated understanding of the benefits. The response covers <b>at least three</b> aspects (lossy, ethical, legal, cultural) of the question. Some of the points made will have been expanded on and some of these will have been expanded upon using examples but these might not always exemplify the points made or be lacking in references to real world implications.	7–9																
2	A line of reasoning has been followed to produce a mostly coherent, relevant, substantiated and logically structured response. The response lists some issues that are likely to focus on only <b>two or three</b> aspects (lossy, ethical, legal, cultural) of the question. Some of the points made will have been expanded upon but are likely to be lacking in clear examples or may not wholly relate to the points being made.	4–6																
1	There is no evidence that a line of reasoning has been followed. Answers in this level may identify a point relating to the use of lossy compression but this part of the question may not be addressed at all. The response will attempt to identify some issues raised by the question; points are not likely to be expanded upon but where they are, the examples will be irrelevant or not relate to the points being made.	1–3																

Ethical, legal and cultural examples are likely to overlap; when marking student responses, credit should be given for the range and clarity of points made, regardless of category. Points could include:

**Ethical:**

- The company has a justifiable goal, (ie by seeking to provide voice controls and improve its algorithms, the company is benefitting its customers, particularly individuals who cannot use traditional input methods).
- The company may record activity that is illegal, raising questions about its responsibility to report the activity to the authorities and duty of care to customers.
- Company employees may misuse the recordings for their own purposes.
- Company employees may be exposed to inappropriate material, raising questions about the duty of care that the company has for its employees.
- Creating 'a slippery slope' through the recordings, ie if the company is allowed to record customers for this purpose, where will it stop?
- The company is contributing to an erosion of privacy for individuals in their home / increasing existing surveillance.
- The company should obtain permission / consent from users before recording them in clear and understandable terms so that customers are providing informed consent.
- There is the potential for increased distrust between users and the company.
- The company may use the recordings for purposes other than improving the voice recognition algorithms.

**Legal:**

- The company must comply with legislation specifically covering the transmission and storage of data across different countries / territories of operation, including the General Data Protection Regulation (GDPR) or the Data Protection Act.
- The company has a responsibility to ensure their security / integrity / confidentiality / availability of the customer data it stores.
- The company must introduce controls to take account of individual privacy rights / legislation across different countries / territories of operation.
- The international nature of the company means that it may have opportunities to circumvent legislation within particular / different countries / territories, eg by getting user permission to transmit data to and store data in less restrictive countries / territories.

**Cultural:**

- All users being recorded can have benefits for groups of users with languages / dialects / accents where data is not widely available (even within the same country / territory).
- All users being recorded can allow the algorithms to advance more quickly, potentially allowing the company to make its products available across languages / user groups / countries / territories more quickly.
- The company should consider the customs and cultural norms of its different users (religions) / countries / territories of operation, particularly with regard to respecting expectations of privacy.
- Weighing up the benefit to specific user groups who rely more heavily on voice control, (eg individuals with physical disabilities) against the compromised privacy.

		<p>Students may be awarded marks for individual issues or expansions upon issues.</p> <p>Expansion points may include further details on how the issue may arise or the impact of the issue occurring.</p> <p><b>Examples of expansion points could include:</b></p> <ul style="list-style-type: none"> <li>• Company employees might lose or leak data due to coercion or inexperience.</li> <li>• If a personally identifiable recording is lost or leaks, there may be severe personal and/or professional consequences for the user(s) on the recording.</li> </ul>
