Paper reference **8PH0/01**

Physics

Advanced Subsidiary

PAPER 1: Core Physics I

You must have:
Scientific calculator, ruler, protractor

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions in Sections A and B.
- Answer the questions in the spaces provided – *there may be more space than you need.*

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- In the question marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.
- The list of data, formulae and relationships is printed at the end of this booklet.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- You are advised to show your working in calculations including units where appropriate.

Pearson

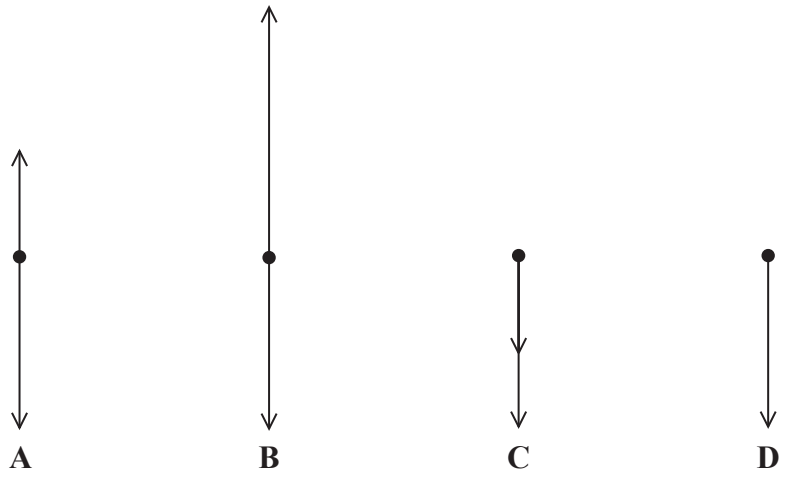
SECTION A

Answer ALL questions.

All multiple choice questions must be answered with a cross in the box ☒ for the correct answer from A to D. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

1 A student throws a ball vertically upwards.

Which of the following shows a free-body force diagram for the ball immediately after it leaves the student's hand?



☒ **A**

☒ **B**

☒ **C**

☒ **D**

(Total for Question 1 = 1 mark)

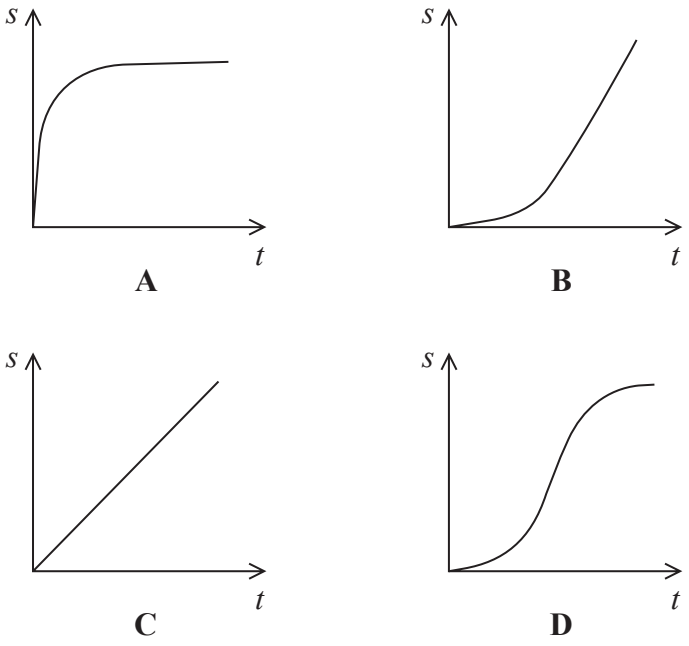
2 Which row of the table contains only scalar quantities?

☒ **A**	speed	displacement	current
☒ **B**	energy	mass	momentum
☒ **C**	power	time	work done
☒ **D**	acceleration	work done	temperature

(Total for Question 2 = 1 mark)

3 A ball falls from rest through glycerine and reaches terminal velocity.

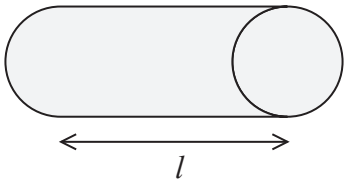
Which of the following graphs shows how displacement s varies with time t for the ball?



- ☒ **A**
- ☒ **B**
- ☒ **C**
- ☒ **D**

(Total for Question 3 = 1 mark)

4 A piece of conducting putty is shaped into a cylinder of uniform cross-sectional area, as shown. The length of the cylinder is l. The resistance between the two ends is 8.0 Ω.



The piece of putty is then rolled out until the length is $2l$.

Which of the following is now the value of the resistance between the two ends?

- ☒ **A** 2.0 Ω
- ☒ **B** 4.0 Ω
- ☒ **C** 16.0 Ω
- ☒ **D** 32.0 Ω

(Total for Question 4 = 1 mark)

5 A car is travelling at a constant speed in a straight line along a horizontal road.

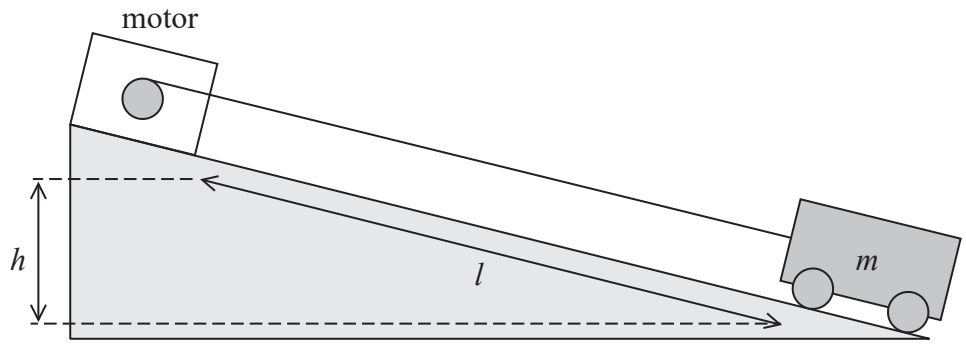
Which row of the table gives a Newton's third law pair of forces?

		Force 1	Force 2
☒	**A**	normal force of car on road	friction between wheels and road
☒	**B**	normal force of car on road	normal force of road on car
☒	**C**	weight of car	normal force of car on road
☒	**D**	weight of car	normal force of road on car

(Total for Question 5 = 1 mark)

6 The diagram shows an electric motor pulling a truck of mass m along a slope. The truck moves through a vertical height h and a distance l along the slope, during a time t.

There is a potential difference V across the motor and a current I in the motor.



Which of the following expressions gives the efficiency of the motor?

☒ **A** $\frac{VIt}{mgl}$

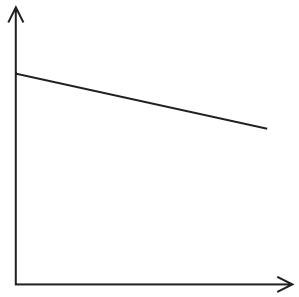
☒ **B** $\frac{VIt}{mgh}$

☒ **C** $\frac{mgl}{VIt}$

☒ **D** $\frac{mgh}{VIt}$

(Total for Question 6 = 1 mark)

7 A student investigated the e.m.f. and internal resistance of a battery. The student produced the following sketch graph.



Which row of the table gives the quantities plotted?

		y-axis	*x*-axis
☒	**A**	e.m.f.	circuit resistance
☒	**B**	e.m.f.	current
☒	**C**	terminal potential difference	circuit resistance
☒	**D**	terminal potential difference	current

(Total for Question 7 = 1 mark)

8 A ball is thrown vertically upwards at a velocity of $6.0\,\text{m}\,\text{s}^{-1}$.

Which of the following gives the maximum height, in m, reached by the ball?

☒ **A** $\dfrac{6.0^2}{2 \times 9.81}$

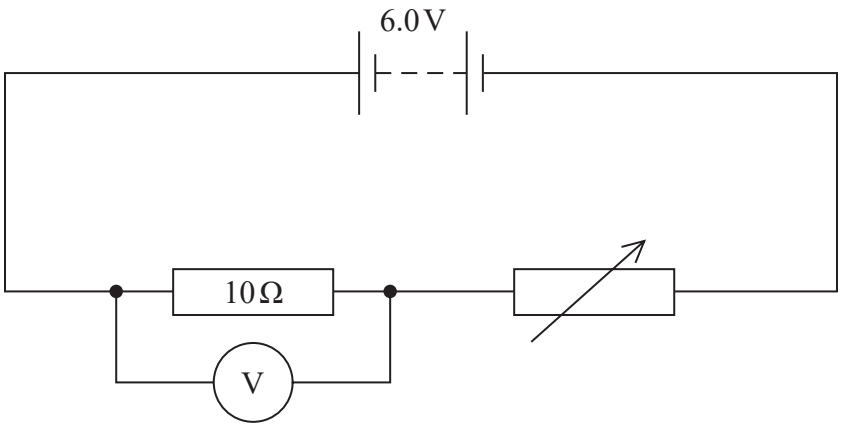
☒ **B** $\dfrac{6.0^2}{2 \times (-9.81)}$

☒ **C** $\dfrac{6.0}{2 \times 9.81}$

☒ **D** $\dfrac{6.0}{2 \times (-9.81)}$

(Total for Question 8 = 1 mark)

9 A student connects the circuit shown. The battery has negligible internal resistance.



The student increases the resistance of the variable resistor from 0 Ω to 40 Ω.

Determine the range of readings on the voltmeter.

.....

.....

.....

.....

Maximum reading on voltmeter = ...

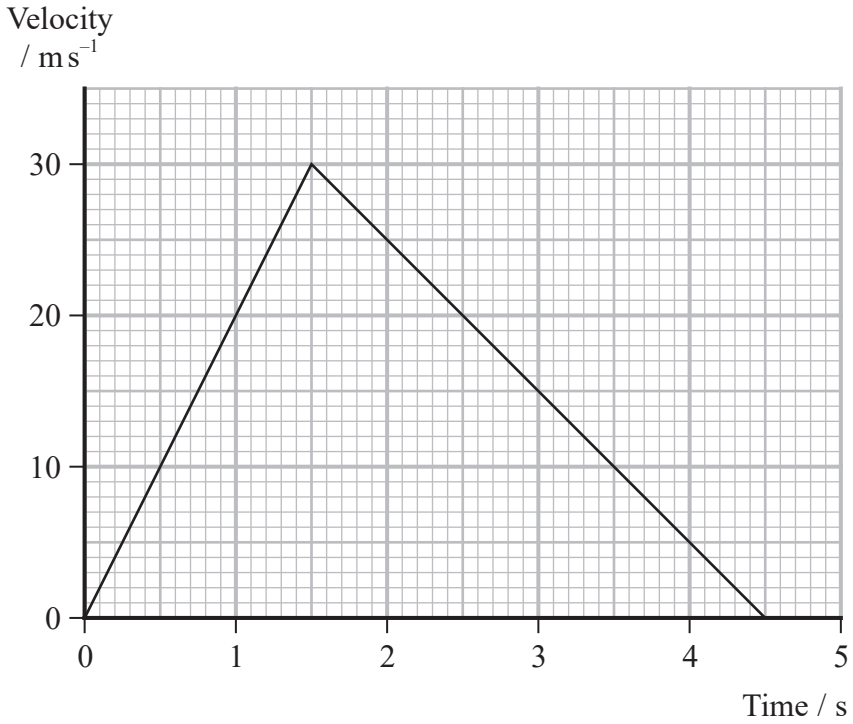
Minimum reading on voltmeter = ...

(Total for Question 9 = 3 marks)

BLANK PAGE

10 A model rocket accelerates vertically upwards then decelerates due to gravity until it reaches a maximum height.

(a) A velocity-time graph for the rocket until it reaches maximum height is shown.



Show that the rocket reaches a maximum height of about 68 m.

(2)

.....

.....

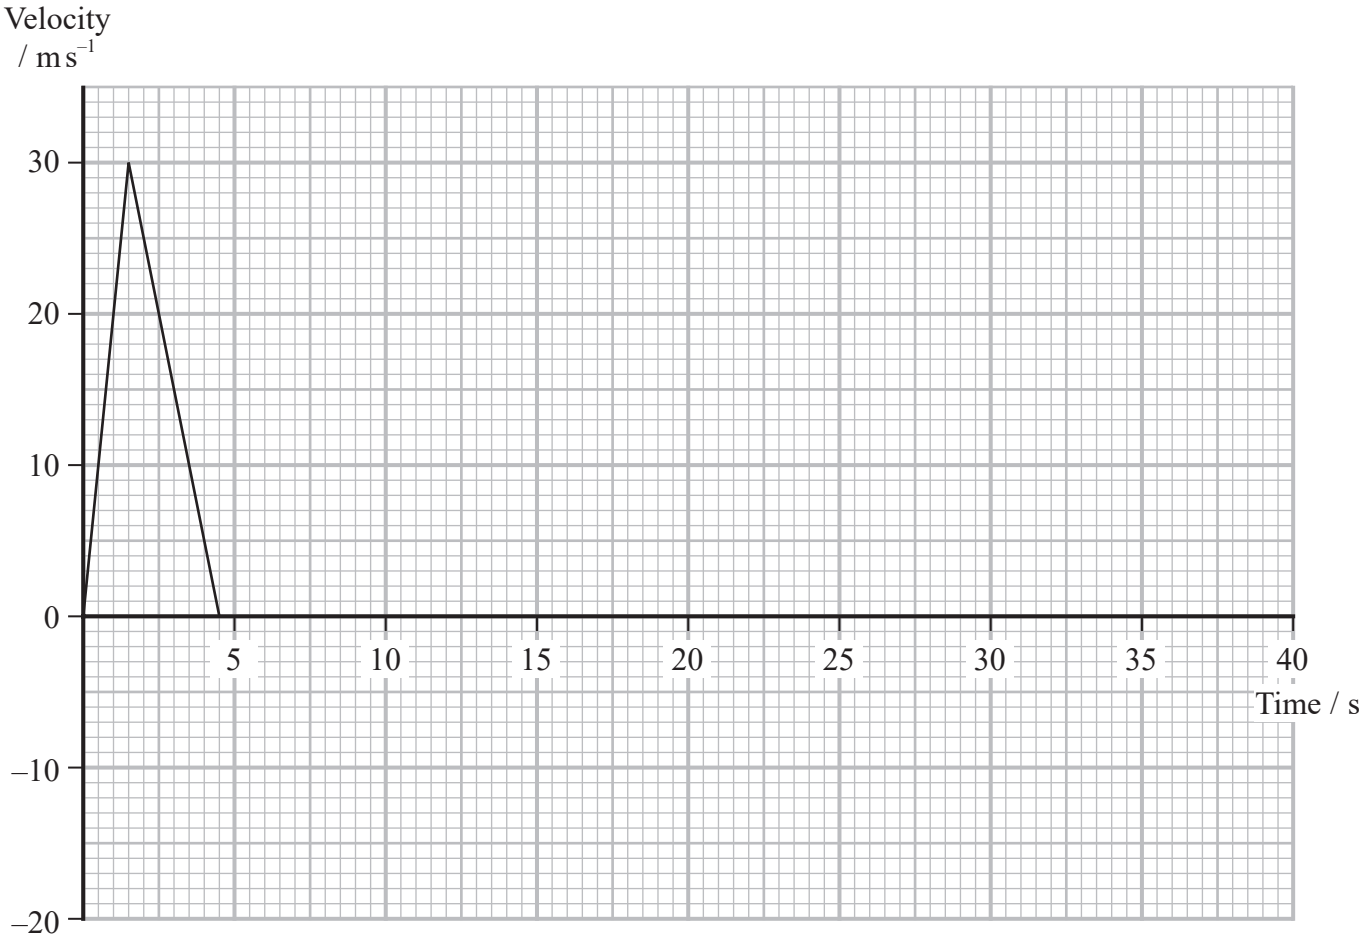
.....

.....

(b) When the rocket reaches the maximum height of 68 m, a parachute opens. Almost instantly, the rocket reaches a terminal velocity of 2.0 m s^{-1}.

Complete the velocity-time graph below for the motion of the rocket until it reaches the ground.

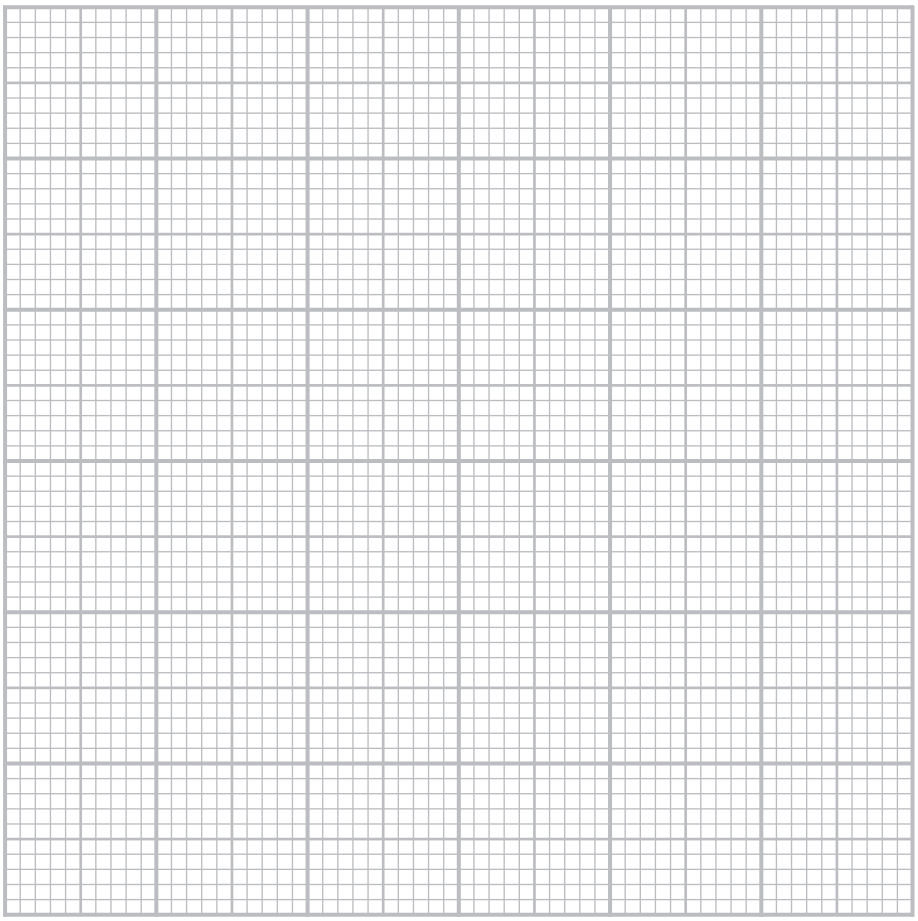
(2)



(c) The rocket is fired upwards a second time when the wind is blowing. The rocket falls with a vertical velocity of $2.0\,m\,s^{-1}$ and a horizontal velocity of $1.5\,m\,s^{-1}$.

Determine the velocity of the rocket by drawing a scaled vector diagram.

(4)



Magnitude of velocity = ... $m\,s^{-1}$

Angle to the horizontal of velocity = ... °

(Total for Question 10 = 8 marks)

11 A student investigates how the resistance of a length of nichrome wire changes with temperature.

(a) The student takes measurements to determine the resistance of the wire at different temperatures.

(i) Draw a diagram of the circuit the student could use.

(1)

(ii) The wire has a thin electrically insulating coating so that it can be coiled up without causing a short circuit.

The student places the coil of wire into a water bath so the temperature of the wire can be varied.

Describe how the student could determine the temperature of the wire accurately.

(2)

.....

.....

.....

.....

(b) Explain, in terms of particle behaviour, why the resistance of the nichrome wire changes as temperature increases.

(4)

(Total for Question 11 = 7 marks)

12 A wire-wound resistor consists of a long length of wire wound around an insulating core. A technician finds a wire-wound constantan resistor labelled 80 Ω.

(a) Calculate the length of the constantan wire used to make the resistor.

resistivity of constantan wire at room temperature = 4.9×10^{-7} Ω m
diameter of wire = 0.28 mm

(3)

Length = ...

(b) A potential difference of 9.8 V is applied across the resistor and the current in the resistor is 0.12 A.

Deduce whether the value labelled on the resistor is supported by these data.

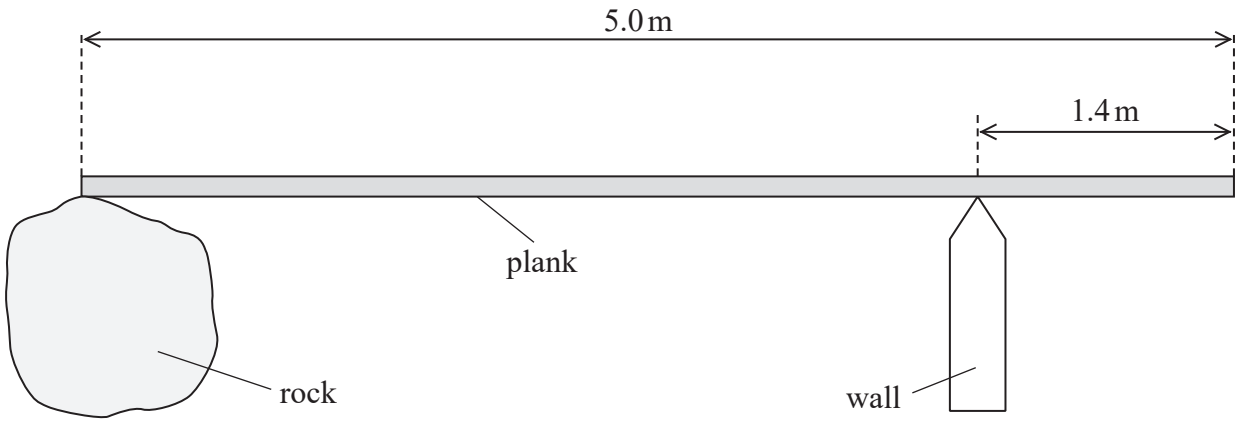
uncertainty in the potential difference = ±0.1 V
uncertainty in the current = ±0.01 A

(4)

(Total for Question 12 = 7 marks)

13 Some students used a plank to make a bridge to cross a stream. The plank rested on a rock and a wall as shown.

Assume the plank is uniform.



(a) (i) Show that the weight of the plank is about 250 N.

mass of plank = 25 kg

(1)

.....

.....

(ii) Determine the force exerted by the wall on the plank.

(3)

.....

.....

.....

.....

.....

Force exerted by wall on plank = ...

(b) A student of weight 550 N states that the plank will tip if she walks from the rock to the other end of the plank.

Justify the student's statement.

(3)

.....

.....

.....

.....

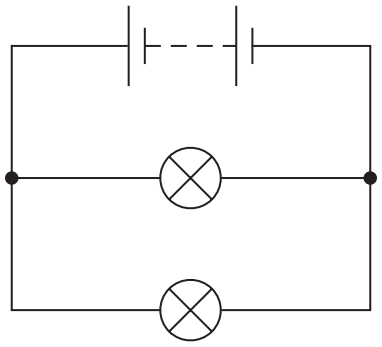
.....

.....

(Total for Question 13 = 7 marks)

***14** A student connects a filament bulb to a battery. The battery has internal resistance.

The student connects an identical bulb in parallel with the first bulb, as shown.



He continues to connect identical bulbs in parallel.

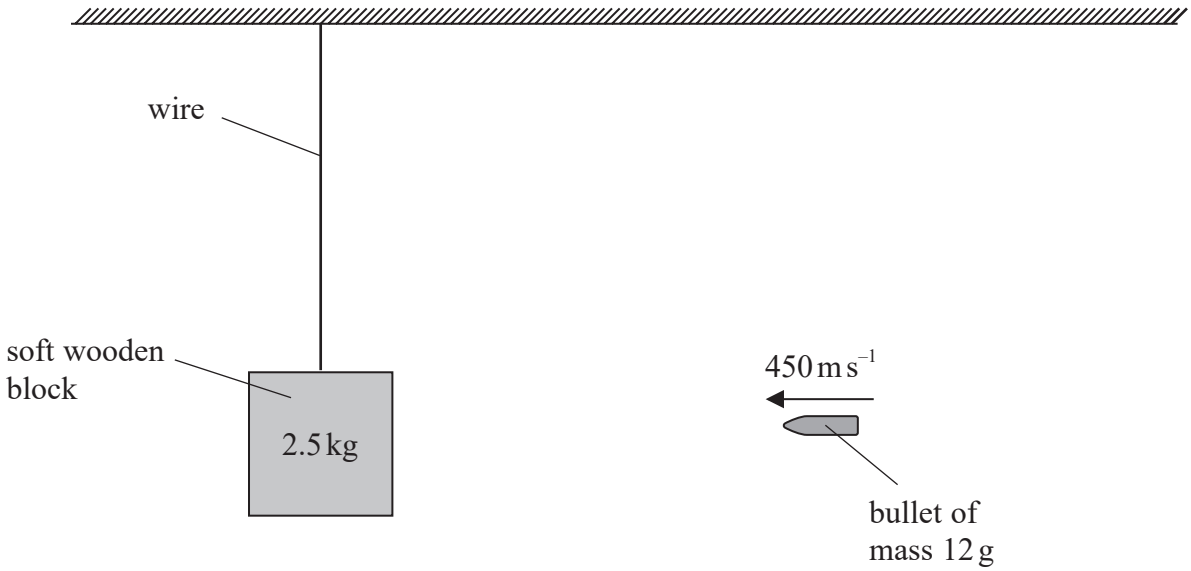
The student observes that the bulbs get dimmer as more bulbs are connected. He also observes that the temperature of the battery increases.

Explain these observations.

(Total for Question 14 = 6 marks)

BLANK PAGE

15 A bullet of mass 12 g moved at a speed of 450 m s^{-1}. The bullet hit a soft wooden block of mass 2.5 kg which was attached to a wire, as shown. The bullet became stuck in the wooden block which swung upwards.



(a) (i) Show that the momentum of the bullet is about 5 kg m s^{-1}.

(2)

.....

.....

(ii) Determine the maximum change in vertical height of the wooden block.

(3)

.....

.....

.....

.....

.....

Maximum change in vertical height = ...

(b) The soft wooden block was replaced with a hard steel block of the same mass.

An identical bullet was fired at the steel block with the same speed as before. The bullet rebounded from the steel block.

Explain why the steel block moved through a greater maximum vertical height than the wooden block.

(5)

(Total for Question 15 = 10 marks)

TOTAL FOR SECTION A = 56 MARKS

BLANK PAGE

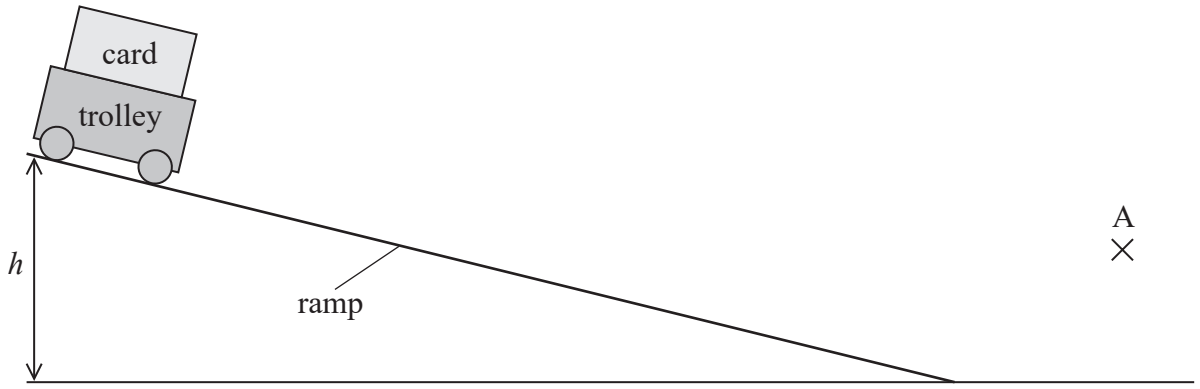
SECTION B

Answer ALL questions in the spaces provided.

16 A student released a trolley from the top of a ramp of length of about 1.5 m, as shown.

The student investigated how the speed v of the trolley at the bottom of the ramp varied as the height h of the ramp was increased.

The student placed a light gate connected to a data logger at position A to measure v as the card passed through the light gate.



(a) Describe how the student could measure h accurately.

(2)

(b) The student derived the following equation for the motion of the trolley

$$h = \frac{v^2}{2g}$$

where g is the acceleration due to gravity.

(i) Explain why plotting a graph of h against v^2 will produce a straight line.

(2)

(ii) The student varied h and measured corresponding values of v. The results are recorded below.

h / cm	v / m s^{-1}	
10.8	1.38	
18.9	1.98	
28.7	2.45	
40.3	2.86	
49.8	3.22	
58.7	3.46	

Plot a graph of h on the y-axis against v^2 on the x-axis on the grid opposite. Use the additional column in the table for your processed data.

(5)

(iii) The student used her results to plot a graph and determine a value for g.

She concluded that her value was consistent with the value of g given on the data sheet at the back of this paper.

Comment on the student's conclusion.

(3)

.....

.....

.....

.....

(Total for Question 16 = 12 marks)

BLANK PAGE

17 An empty lift is positioned at the first floor of a building. It is suspended by 6 identical steel cables of length 50 m.

(a) Calculate the extension of each lift cable.

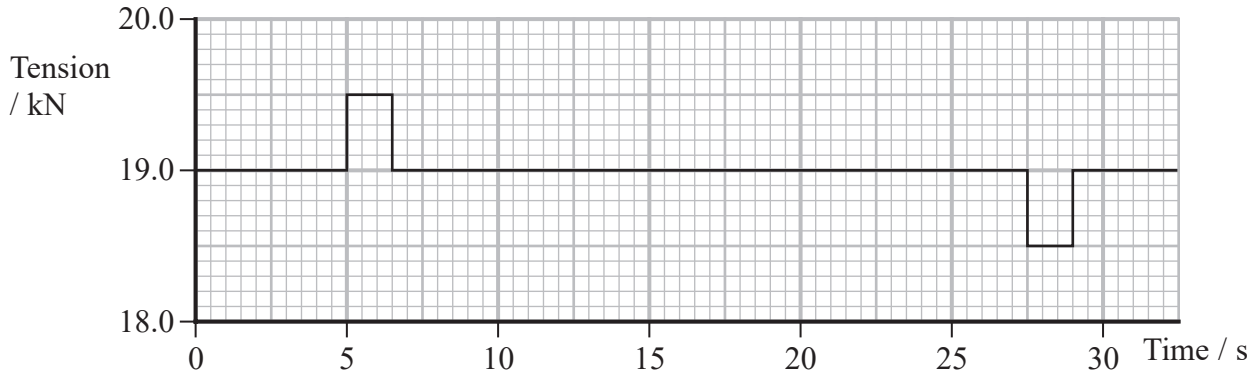
cross-sectional area of a cable = $3.1 \times 10^{-4}\,m^2$
Young modulus of steel = 200 GPa
weight of lift = 12 kN

(3)

Extension = ...

(b) Ten people enter the lift. After 5 seconds the lift starts to move upwards and stops at the top floor of the building.

The graph shows the total tension force in the cables during this time.



(i) Calculate the total mass of the people in the lift.

weight of lift = 12 kN

(3)

Mass of people = ...

(ii) Explain the motion of the lift between 5 s and 29 s.

(3)

(c) When the lift is empty, a technician removes one of the cables for maintenance.

Assess how removing one cable would affect the extension of the remaining cables.

(3)

(Total for Question 17 = 12 marks)

TOTAL FOR SECTION B = 24 MARKS
TOTAL FOR PAPER = 80 MARKS

List of data, formulae and relationships

Acceleration of free fall	$g = 9.81\ \text{m s}^{-2}$	(close to Earth's surface)
Electron charge	$e = -1.60 \times 10^{-19}\ \text{C}$	
Electron mass	$m_e = 9.11 \times 10^{-31}\ \text{kg}$	
Electronvolt	$1\ \text{eV} = 1.60 \times 10^{-19}\ \text{J}$	
Gravitational field strength	$g = 9.81\ \text{N kg}^{-1}$	(close to Earth's surface)
Planck constant	$h = 6.63 \times 10^{-34}\ \text{J s}$	
Speed of light in a vacuum	$c = 3.00 \times 10^{8}\ \text{m s}^{-1}$	

Mechanics

Kinematic equations of motion

$$s = \frac{(u+v)t}{2}$$

$$v = u + at$$

$$s = ut + \tfrac{1}{2}at^2$$

$$v^2 = u^2 + 2as$$

Forces

$$\Sigma F = ma$$

$$g = \frac{F}{m}$$

$$W = mg$$

$$\text{moment of force} = Fx$$

Momentum

$$p = mv$$

Work, energy and power

$$\Delta W = F\Delta s$$

$$E_k = \tfrac{1}{2}mv^2$$

$$\Delta E_{grav} = mg\Delta h$$

$$P = \frac{E}{t}$$

$$P = \frac{W}{t}$$

$$\text{efficiency} = \frac{\text{useful energy output}}{\text{total energy input}}$$

$$\text{efficiency} = \frac{\text{useful power output}}{\text{total power input}}$$

Electricity

Potential difference

$$V = \frac{W}{Q}$$

Resistance

$$R = \frac{V}{I}$$

Electrical power and energy

$$P = VI$$

$$P = I^2R$$

$$P = \frac{V^2}{R}$$

$$W = VIt$$

Resistivity

$$R = \frac{\rho l}{A}$$

Current

$$I = \frac{\Delta Q}{\Delta t}$$

$$I = nqvA$$

Materials

Density

$$\rho = \frac{m}{V}$$

Stokes' law

$$F = 6\pi\eta r v$$

Hooke's law

$$\Delta F = k\Delta x$$

Young modulus

$$\text{Stress } \sigma = \frac{F}{A}$$

$$\text{Strain } \varepsilon = \frac{\Delta x}{x}$$

$$E = \frac{\sigma}{\varepsilon}$$

Elastic strain energy

$$\Delta E_{\text{el}} = \tfrac{1}{2} F \Delta x$$

Waves and particle nature of light

Wave speed

$$v = f\lambda$$

Speed of a transverse wave on a string

$$v = \sqrt{\frac{T}{\mu}}$$

Intensity of radiation

$$I = \frac{P}{A}$$

Power of a lens

$$P = \frac{1}{f}$$

$$P = P_1 + P_2 + P_3 + \ldots$$

Thin lens equation

$$\frac{1}{u} + \frac{1}{v} = \frac{1}{f}$$

Magnification for a lens

$$m = \frac{\text{image height}}{\text{object height}} = \frac{v}{u}$$

Diffraction grating

$$n\lambda = d \sin\theta$$

Refractive index

$$n_1 \sin\theta_1 = n_2 \sin\theta_2$$

$$n = \frac{c}{v}$$

Critical angle

$$\sin C = \frac{1}{n}$$

Photon model

$$E = hf$$

Einstein's photoelectric equation

$$hf = \phi + \tfrac{1}{2} m v_{\text{max}}^2$$

de Broglie wavelength

$$\lambda = \frac{h}{p}$$
