

Tuesday 23 May 2023 – Morning AS Level Chemistry A

H032/02 Depth in chemistry

Time allowed: 1 hour 30 minutes

You must have:

· the Data Sheet for Chemistry A

You can use:

- · a scientific or graphical calculator
- an HB pencil

Please write clearly in black ink. Do not write in the barcodes .								
Centre number						Candidate number		
First name(s)								
Last name								

INSTRUCTIONS

- Use black ink. You can use an HB pencil, but only for graphs and diagrams.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.
- Answer all the questions.
- Where appropriate, your answer should be supported with working. Marks might be given for using a correct method, even if your answer is wrong.

INFORMATION

- The total mark for this paper is 70.
- The marks for each question are shown in brackets [].
- Quality of extended response will be assessed in questions marked with an asterisk (*).
- This document has 16 pages.

ADVICE

· Read each question carefully before you start your answer.

Turn over

- 1 This question is about titanium (atomic number 22) and its compounds.
 - (a) Titanium exists as a mixture of five isotopes.

A chemist analyses a sample of titanium using mass spectrometry.

The results are shown in the table below.

Isotope	Abundance (%)
⁴⁶ Ti	8.30
⁴⁷ Ti	7.40
⁴⁸ Ti	73.70
⁴⁹ Ti	5.40
⁵⁰ Ti	5.20

(i)	Calculate t	the relative	atomic mass	of titanium	in the	sample
-----	-------------	--------------	-------------	-------------	--------	--------

Give your answer to 2 decimal places.

	relative atomic mass =	[2]
(ii)	Complete the electron configuration of a titanium atom.	
	1s ²	[1]

(iii) Complete the table to show the number of protons, neutrons and electrons in a $^{48}\text{Ti}^{2+}$ ion.

	Protons	Neutrons	Electrons
⁴⁸ Ti ²⁺ ion			

[1]

				3						
(b)	An	ore of t	itanium contains impure	e TiO ₂ .						
	Tita	itanium is manufactured from TiO ₂ in a two-stage process.								
	Sta	ge 1	TiO ₂ + 2C + 2Cl ₂ -	→ TiCl ₄ + 2CO	Reaction 1.1					
	Sta	ge 2	$TiCl_4 + 4Na \rightarrow Ti +$	4NaC <i>l</i>	Reaction 1.2					
	(i)	The co	ommon name for TiO ₂ i	s titanium dioxide.						
		What	is the systematic name	of TiO ₂ ?						
						[1]				
	(ii)	In Rea	action 1.2, the percenta	age yield of titanium from	ı TiC <i>l</i> ₄ is 72.0%.					
		Calcul titaniu		, in kg, of sodium that is	needed to produce 1.00 kg o	of				
		Give y	our answer to 3 signific	ant figures.						
				mass of sodium =		kg [4]				
	(iii)	React	t ion 1.2 produces a mix	ture of titanium and sodi	um chloride.					
		Sugge	est how titanium could b	e separated from this m	ixture at room temperature.					
		Explai	in your answer.							

This question is about some elements in Period 3 and compounds they form.

(a)	a) A student adds a small piece of calcium to a beaker containing an excess of water.					
	(i)	Constru would r	uct the equation for the reaction and predict one observation that the student make.			
		Equation	on			
		Observ	ation			
			[2]			
	(ii) Suggest one difference that the student would observe in the reaction of barium wit water compared to the reaction of calcium with water.					
			[1]			
(b)	A st	udent ha	as a 5.00 g mixture of sodium chloride, NaC $l(s)$, and barium nitrate, Ba(NO $_3$) $_2$ (s).			
	The	student	also has a solution of sodium sulfate, Na ₂ SO ₄ (aq).			
		student ture.	uses the method below to determine the percentage by mass of $\mathrm{NaC}\mathit{l}(s)$ in the			
	Ste	p 1	Dissolve the 5.00 g mixture in distilled water.			
	Ste	p 2	Add an excess of $\mathrm{Na_2SO_4}(\mathrm{aq})$ to the solution. A precipitate of barium sulfate forms.			
	Ste	р 3	Filter off the precipitate, wash with water, and dry.			
	Step 4 Weigh the		Weigh the dried precipitate.			
	The	nass of barium sulfate is 233.4 g mol ⁻¹ .				
	(i)	Write a	n equation for the formation of barium sulfate in step 2 .			
		Include	state symbols.			
			[2]			

2

(ii)	The student obtains 3.28 g of precipitate.
	Calculate the percentage by mass of NaC $l(s)$ in the 5.00 g mixture.
	Give your answer to 3 significant figures.
	percentage by mass of NaC <i>l</i> (s) =% [4]
	percentage by mass of NaOr(s) =/0 [4]
(iii)	The student changes the method in 2(b) .
	In step 2 , the student adds an excess of silver nitrate solution, $AgNO_3(aq)$, instead of $Na_2SO_4(aq)$.
	Explain whether this change would allow the student to determine the percentage by mass of $NaCl(s)$ in the mixture.
	[2]

(c) The table below shows melting points and electrical conductivities of some elements in Period 3 and compounds they form.

Substance	Magnesium sulfide, MgS	Aluminium, A <i>l</i>	Silicon, Si	Phosphorus trichloride, PC1 ₃
Melting point/°C	2000	660	1414	-94
Electrical conductivity		Good	Poor	
Type of lattice	Giant			
structure				

(i)	Complete the table above to show the type of lattice structure of each substance. [4]
(ii)	Explain the following:
	• MgS has a higher melting point than PCl_3 .
	Al has a greater electrical conductivity than Si.
	Melting points
	Conductivities
	[4]

This question is about halogens and halogen compounds.

3

* Seawater contains very small quantities of dissolved iodide ions.	
The concentration of potassium iodide, KI, in seawater is 0.150 g dm ⁻³ .	
lodine can be extracted by bubbling chlorine gas through seawater.	
Explain why chlorine is more reactive than iodine and determine the volume, in $\mbox{dm}^3,$ of seawater that is needed to manufacture 1.00 tonne of iodine, $\mbox{I}_2.$	[6]
Additional answer space if required.	

(D)	bleaching powder.
	$2\mathrm{C}l_2 \ + \ 2\mathrm{Ca(OH)}_2 \ \rightarrow \ \mathrm{CaC}l_2 \ + \ \mathrm{Ca(OC}l)_2 \ + \ 2\mathrm{H}_2\mathrm{O}$
	This is a disproportionation reaction.
	State what is meant by disproportionation and use oxidation numbers to show that disproportionation has taken place.
	[3]
(c)	A student is studying the hydrolysis of haloalkanes.
	The equation for the alkaline hydrolysis of 2-bromopropane, $\mathrm{CH_3CHBrCH_3}$, is shown below.
	$\mathrm{CH_{3}CHBrCH_{3}\ +\ OH^{-}\rightarrow\ CH_{3}CHOHCH_{3}\ +\ Br^{-}}$
	Use the curly arrow model to outline the mechanism for the alkaline hydrolysis of 2-bromopropane.
	Show relevant dipoles and lone pairs, and name the mechanism.

name of mechanism[3]

(d) The student sets up an experiment to compare the rates of hydrolysis of 2-bromopropane and 2-iodopropane.

The student uses the method below.

- **Step 1** Place two test tubes, both containing aqueous silver nitrate and ethanol, in a water bath at 60 °C.
- **Step 2** Add five drops of 2-bromopropane to one test tube and five drops of 2-iodopropane to the other test tube.
- **Step 3** Record the time taken for a precipitate to appear in each test tube.
- (i) Complete the table below to show the formula and colour of each precipitate formed.

Haloalkane	Formula of precipitate	Colour of precipitate
2-bromopropane		
2-iodopropane		

[2]

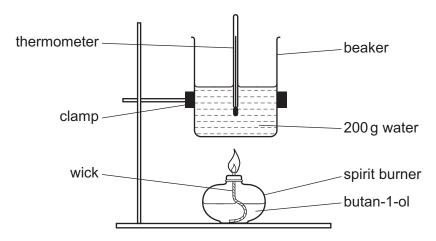

(ii)	Predict which precipitate would form first and explain the difference in the rates of hydrolysis of 2-bromopropane and 2-iodopropane.
	[1]

	4	This	question	is	about	the	enthalpy	change of	combustion	of	alcohols
--	---	------	----------	----	-------	-----	----------	-----------	------------	----	----------

(a)	Explain the term enthalpy change of combustion.

(b) A student carries out an experiment to determine the enthalpy change of combustion, $\Delta_c H$, of butan-1-ol, $CH_3CH_2CH_2CH_2OH$.

The student sets up the apparatus as shown below.

The student's results are shown in the table below.

Initial temperature of water/°C	18.5
Final temperature of water/°C	49.5
Mass of burner before heating/g	212.38
Mass of burner after heating/g	211.07

(i) The thermometer had an uncertainty of \pm 0.25 °C in each temperature reading. Calculate the percentage uncertainty in the temperature change.

percentage uncertainty = % [1]

Use the student's results to determine $\Delta_{c}H$ of butan-1-ol in kJ mol ⁻¹ .
Explain why this value of $\Delta_{\rm c}H$ is different from the data book value and suggest how the experimental design could be modified to improve the accuracy of the $\Delta_{\rm c}H$ value obtained.
Additional appropriate and a first sized
Additional answer space if required.

(iii) Another student carries out the experiment in **4(b)** using 150 g of water in the beaker instead of 200 g.

Calculate the mass of butan-1-ol that would produce the same temperature rise as in the experiment in **4(b)**.

Assume the same heat losses.

(c) The enthalpy change of combustion of ethanol, $\Delta_{\rm c}H$, in the gaseous state can be calculated using average bond enthalpies.

H H H H H H C − C − C − O − H(g) + 3 O=O(g)
$$\longrightarrow$$
 2 O=C=O(g) + 3H − O − H(g) $\triangle_c H = -1276 \text{ kJ mol}^{-1}$ H H

(i) Use this value of $\Delta_c H$ and the average bond enthalpies below to calculate the average bond enthalpy of C=O.

Bond	Average bond enthalpy/ kJ mol ⁻¹
C–H	+413
C–C	+347
C–O	+358
O–H	+464
O=O	+498

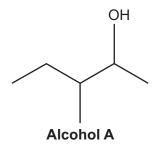

(ii) Methoxymethane, CH₃OCH₃, is an isomer of ethanol.

On combustion, methoxymethane, in the gaseous state, produces carbon dioxide and steam.

 $\Delta_{\rm c} H$ for methoxymethane is more negative than $\Delta_{\rm c} H$ for ethanol.

Explain why the $\Delta_{\rm c}H$ values are different, in terms of the bonds broken and the bonds formed.	
	• • •
	2]

- 5 This question is about alkenes.
 - (a) A mixture of alkenes is produced when water is eliminated from alcohol A.

(i) What is the systematic name of alcohol A?

.....[1]

- (ii) Alcohol A is refluxed with an acid catalyst.
 - A mixture of alkene isomers **B**, **C** and **D** is formed.
 - Alkenes **B** and **C** show *E/Z* isomerism but alkene **D** does not.

Construct the equation for the formation of alkene **D** from alcohol **A**.

Show the structure of the organic product.

[2]

(iii) The skeletal formulae of alkenes B and C are shown below.

	Alkene B	Alkene C
Skeletal formula		
Isomer	Z	E

Use the Cahn-Ingold-Prelog priority rules to explain why alkene ${\bf B}$ is the Z isomer.
[2]

(b) A chemistry company is developing water-soluble polymers.

The chemists decide to use compound **E**, shown below, as the monomer.

Compound E

(i) Draw a section of the polymer formed, showing **two** repeat units, and suggest why this polymer is likely to be soluble in water.

Section of polymer (two repeat units)

Reason for solubility in water

	, , , , , , , , , , , , , , , , , , ,
	[2]
(ii)	Outline two ways that waste hydrocarbon polymers can be processed usefully, rather than being disposed of in landfill sites.
