

Mark Scheme (Results)

October 2020

Pearson Edexcel GCE In Chemistry (9CH0) Paper 3: General and Practical Principles in Chemistry

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Using the Mark Scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.

/ means that the responses are alternatives and either answer should receive full credit.

() means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer. Phrases/words in **bold** indicate that the <u>meaning</u> of the phrase or the actual word is **essential** to the answer.

ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities.

Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

Question Number	Answer		Additional Guidance	Mark
1(a)	An answer that makes reference to:			(2)
(4)	 addition of (dilute/strong) name/formula of acid 	(1)	Allow weak acids If formula given then must be correct	
	effervescence/bubbling/fizzing	(1)	Allow Gas given off which turns limewater cloudy	
			Do not award just 'gas/ CO ₂ given off' Do not award incorrect observations such as precipitate forming due to addition of acid	
			M2 dependent on M1 or 'near miss'	

Question Number	Answer		Additional Guidance	Mark
	An answer that makes reference to:			(2)
1(b)	addition of barium chloride/nitrate (solution)	(1)	Accept formulae BaCl ₂ /Ba(NO ₃) ₂	
			Ignore addition of acids such as HCl or HNO3 but do not award M1 if addition of sulfuric acid	
	white precipitate forms	(1)	Allow white solid If ppt identified then must be correct	
			M2 dependent on M1 or 'near miss'	

(Total Question 1 = 4 marks)

Question Number	Answer	Additional Guidance	Mark
2(a)(i)	 An answer that makes reference to: (potassium ions) lilac and (strontium ions) crimson / red 	Allow scarlet Ignore 'shades' except Do not award 'brick red' / 'orange-red'	(1)

Question Number	Answer	Additional Guidance	Mark
	An answer that makes reference to:		(1)
2(a)(ii)	 the crimson/red colour will mask/hide/obscure the (lighter) lilac colour 	Allow 'one colour will hide the other' Allow only one colour seen Allow difficult to distinguish the two colours Allow TE from colours in (a)(i) Do not award colour from chloride ions Do not award idea of new colour resulting from both	
		Ignore reference to impurities	

Question Number	Answer		Additional Guidance	Mark
2(b)(i)	 An answer that makes reference to: nichrome produces no colour (when heated in the flar test) 	ne	Allow does not change the flame colour	(2)
	or iron can produce a colour/sparks	(1)		
	 nichrome is inert/ stable to heat/unreactive or iron reacts with oxygen/air and or hydrochloric acid 	(1)	Ignore references to melting/cost Ignore reference to nichrome not being a transition element	

Question Number	Answer	Additional Guidance	Mark
2(b)(ii)	An answer that makes reference to:		(1)
2(0)(1)	 (the wire is heated) to remove the residue of any previous sample being tested 	Allow 'to clean the wire'	
		Ignore 'to sterilise/sanitise/disinfect the wire'	

Question Number	Answer	Additional Guidance	Mark
2(b)(iii)	 An answer that makes reference to: the acid can become contaminated with residue from previous tests (which can give incorrect results) 		(1)

Question Number	Answer	Additional Guidance	Mark
2(b)(iv)	An answer that makes reference to:		(1)
	• (concentrated hydrochloric acid) forms volatile chlorides	Allow (the wire is moistened) to enable some of the solid metal salt to become attached/stick to the wire (and then tested in the Bunsen flame)	
		Do not award reference to bonding or reacting or adsorb or absorb with the wire	

Question Number	Answer		Additional Guidance	Mark
2(c)	An explanation that makes reference to:		Lack of reference to 'electrons' results in a maximum of (2) for an otherwise correct answer	(3)
	 electrons are excited/ promoted (by heat to higher energy levels / orbitals) 	(1)	Allow raised/jump/moved up for 'excited'	
	 electrons fall from the excited state (to their ground state/to lower energy levels) 	(1)	Allow return/drop/de-excite for 'fall'	
	 electrons release energy/photons as (visible) light/ in visible region 	(1)	Allow Wavelength/ frequency/ radiation for 'energy'	
			Do not award reflected for 'release' Do not award colour for 'energy'	

(Total Question 2 = 10 marks)

Question Number	Answer		Additional Guidance	Mark
	A description that makes reference to two of the following:			(2)
3(a)(i)				
	 rinse the glass rod (into the beaker) 			
	or			
	rinse beaker (several times)			
	or			
	rinse the funnel	(1)		
	 transfer the washings to the (volumetric) flask 	(1)		
			Ignore reference to weighing	

Question Number	Answer	Additional Guidance	Mark
3(a)(ii)	An answer that makes reference to:		(1)
	 removal of the excess solution will remove some of the dissolved sodium hydroxide (so that the exact concentration will be unknown) or the concentration won't be known because the total volume will be more than 250cm³ 	Allow 'not just removing deionised water' Ignore just 'decrease the concentration'	

Question Number	Answer		Additional Guidance	Mark
3(b)(i)	An answer that makes reference to any two of the following:			(2)
	• the tip of the burette must be filled with solution	(1)	Allow 'jet space' for tip Allow just 'remove air bubbles'	
	remove the funnel	(1)		
	ensure the burette is held vertical	(1)	Allow 'upright' for vertical	
	 eyes are level with the bottom of the meniscus 	(1)	Allow 'take readings at eye-level' Allow 'read from the bottom of the meniscus'	
			Ignore reference to clamping and use of stand	

Question Number	Answer	Additional Guidance	Mark
3(b)(ii)	 An answer that makes reference to the titre will be larger because either there is water left in the burette or the sodium hydroxide solution will be diluted/lower 	Allow the titre will be larger because the burette should have been rinsed with sodium hydroxide	(1)

Question Number	Answer		Additional Guidance	Mark
3(c)(i)	 An assessment that includes (M1) the vertical part of the graph is at ~7 - 10/ the mid-point is at 8.5-8.8 (M2) the mid-point of the colour change of methyl red is 5.1 (M3) pH range of methyl red does not lie (completely) within the vertical range of the pH curve (so it is not suitable) (M4) the colour change will be complete before the equivalence point is reached 	(1) (1) (1) (1)	Allow 'equivalence point/end-point' for 'the vertical part of the graph/ the mid-point' Allow methyl red changes colour in the range/ has a pH range 4.2 - 6.3/ pK _{in} 5.1 Allow, after stating M1 and M2, 'this means that methyl red is unsuitable' Allow end-point/neutralisation point for equivalence point Do not award colour change to red Ignore references to choice of other indicators	(4)

Question Number	Answer	Additional Guidance				Mark
3(c)(ii)	An answer that includestwo ticks and two crosses as shown	Indicator	pH range	Tick or Cross		(1)
		Bromocresol purple	5.2 - 6.8	х		
		Thymol blue	8.0 - 9.6	\checkmark		
		Thymolphthalein	8.3 - 10.6	\checkmark		
		Alizarin yellow R	10.1 - 13.0	x		
	Do not award blank boxes for (x)					

Question Number	Answer	Additional Guidance			Mark		
		Exemplar table					(1)
3(d)(i)	 completed table 	Titration number	1	2	3	4	
		Final burette reading / cm ³	13.00	25.50	37.90	50.00	
		Initial burette reading / cm ³	0.25	13.00	25.50	37.90	
		Titre / cm ³	12.75	12.50	12.40	12.10	
		Concordant titres (\checkmark)		\checkmark	\checkmark		
		COMMENT		•			
		Allow 12.5/ 12.4 /12.1					
		Do not award additional t	ticks				

Question Number	Answer	Additional Guidance	Mark
3(d)(ii)	 calculation of percentage measurement uncertainty 	Example of calculation (%= ((0.05 x 4) ÷ 12.40 x 100) = 1.6%/1.61% / 2%	(1)
		Ignore SF	
		Do not award 1.65% rounded to 2%	

Question Number		Answer		Additional Guidance	Mark
3(e)				Example of calculation	(5)
5(2)	•	(M1) calculation of number of moles of NaOH weighed out (1))	n(NaOH)= 3.80 ÷ 40 = 0.095/ 9.5 x 10 ⁻² (mol)	
	•	(M2) concentration of NaOH solution (1))	[NaOH]= 0.095÷0.250=0.38(mol dm ⁻³)	
	•	(M3) number of moles of NaOH in titre (1))	n(NaOH) = 0.38 x 0.0119 = 0.004522/ 4.522 x 10 ⁻³ (mol)	
	•	(M4) molar concentration of CH ₃ COOH solution (1))	[CH ₃ COOH] = 4.522 x 10 ⁻³ ÷ 0.025 = 0.18088 (mol dm ⁻³)	
	•	(M5) concentration in g dm ⁻³ of CH ₃ COOH solution to $2/3$ SF (1))	[CH ₃ COOH] = 0.18088 x 60 = 10.8528 (g dm ⁻³) = 10.9 / 11 (g dm ⁻³)	
				Do not award 10.90 (g dm ⁻³)	
				Correct answer without working scores (5)	
				Accept steps in a different order, e.g. moles x 60 before dividing by 0.025	
				TE throughout	
				Penalise incorrect units in M5 only	

(Total Question 3 = 18 marks)

Question Number	Answer		Additional Guidance	Mark
4(a)	• molar mass of hydrated copper(II) sulfate	(1)	Example of calculation $M_r(CuSO_4.5H_2O)= 249.6 \text{ (g mol}^{-1})$	(2)
	• mass of 0.0250 mol hydrated copper(II) sulfate	(1)	m(CuSO ₄ .5H ₂ O)= 6.24 (g) Answer to 2 / 3SF	
			Correct answer with no working scores (2)	
			TE from incorrect M _r	

Question Number	Answer		Additional Guidance	Mark
			Example of calculation	(3)
4(b)	• evaluation of Q	(1)	Q =(Δ <i>H</i> x n)=18.2 x 0.025 = 0.455(kJ) or 455 J	
	• rearrangement to give ΔT	(1)	Δ <i>T</i> =Q ÷(m x c) = 455 ÷ (45.00 x 4.18) = 2.4189(°C)	
	 Answer to 1 or 2SF and temperature change 	(1)	ΔT = 2/2.4 °C/ K and decrease Allow -2/2.4 °C/ K Correct final answer without working scores (3)	
			TE throughout	

Question Number	Answer		Additional Guidance	Mark
4(c)(i)	• labelled y axis, including units, with appropriate scale	(1)	Allow energy for 'enthalpy' Ignore horizontal axis Do not award enthalpy change/ΔH for y axis	(3)
	 direction and placement of enthalpy changes, +18.2 and -84.5 	(1)	Allow ΔH_1 and ΔH_2 for respective values Arrows must be shown and in the correct direction Ignore activation energy 'curves' Do not award double-headed arrows	
	Entities with state symbols	(1)	Ignore inclusion of '+ aq'	
			Example of diagram	
			100- CuSO4(s) 80-	
			60- Enthulpy H- H- kJmol-1 20-	
			Arbitrary <u>CuSQ.(aq)</u> zero -26- CuSQ.+.5H2OG)	

Question Number	Answer	Additional Guidance	Mark
4(c)(ii)	 Use of Hess's law to calculate Δ_rH shown on the diagram 	Value from diagram = -102.7 (kJ mol ⁻¹) Allow $\Delta_r H = \Delta H_2 - \Delta H_1 = -84.5 - (+18.2) = -102.7$ (kJ mol ⁻¹) Allow -103 (kJ mol ⁻¹) Do not award if no working shown on the diagram	(1)

Question Number	Answer	Additional Guidance	Mark
4(d)	An answer that makes reference to Cannot react exactly 5 mol of water with 1 mol of anhydrous copper(II) sulfate 	Cannot measure the temperature (change) for a solid Description that states more (than 5) water molecules will attach to some CuSO ₄ while less (than 5) water molecules will attach to other CuSO ₄ ACCEPT reasonable ideas such as some water may evaporate (due to exothermic reaction) Ignore heat loss to surroundings if given as an alternative reason Do not award heat is needed to start the reaction	(1)

(Total Question 4 = 10 marks)

Question Number	Answer	Additional Guidance	Mark
5(a)		Example of equation	(2)
		$ \begin{array}{c} O \\ O $	
	• formula of sodium benzoate (1)	Accept C ₆ H ₅ COONa and/or C ₆ H ₅ COO ⁽⁻⁾ Na ⁽⁺⁾ Allow omission of charges Allow Kekulé structures Do not award O-Na	
	• remainder of equation (1)	Ignore state symbols even if incorrect Standalone mark	

Question Number	Answer	Additional Guidance	Mark
5(b)	An answer that makes reference to:invert the funnel and then open the tap	Allow Just removal of stopper/bung/lid/top	(1)
		Ignore shaking	

Question Number	Answer	Additional Guidance	Mark
5(c)	An answer that makes reference to		(1)
5(c)	• (Water is) more dense (than ether/than the organic layer)	Accept reverse argument	
		Ignore references to immiscibility	
		Do not award references to water being insoluble	

Question Number	Answer	Additional Guidance	Mark
5(d)	An answer that makes reference to:		(1)
	 some sodium benzoate has dissolved in the ether (instead of the aqueous sodium carbonate) 	Ignore to increase the yield of sodium benzoate Ignore to remove the product from the ether	

Question Number	Answer	Additional Guidance	Mark
E(a)	An explanation that makes reference to:		(2)
5(e)	• The benzoate ion is protonated by the hydrochloric acid (1)	Allow HCl/acid reacts to form benzoic acid	
	 benzoic acid is less soluble (in water) than the sodium salt (1) 	Allow benzoic acid is insoluble	

Question Number	Answer	Additional Guidance	Mark
5(f)	 A labelled diagram that includes Buchner/side-armed flask connected to vacuum/ pump/ water aspirator (funnel with flat filter paper (1) 		(2)

Answer		Additional Guidance	Mark
Method 1 • (M1) mass of benzoic acid in 50 cm ³ • (M2) no. of moles of benzoic acid in 50 cm ³ OR			(3)
 Method 2 (M1) moles of benzoic acid in 1000 cm³ (M2) no. of moles of benzoic acid in 50 cm³ 	(1) (1)	n=(1.70 ÷ 122 =) 0.01393 (mol) n=(0.01393 x 0.05 =) 6.967 x 10 ⁻⁴ (mol)	
 (M3) evaluation of the number of molecules of benzoic acid in 50 cm³ 	(1)	=4.19 x 10 ²⁰ / 4.2 x 10 ²⁰ Ignore sf except 1sf Penalise excessive (6+) SF Allow use of 6.0 x 10 ²³ to give 4.18 x 10 ²⁰ for (3) Correct final answer without working scores (3)	
	Method 1 • (M1) mass of benzoic acid in 50 cm ³ • (M2) no. of moles of benzoic acid in 50 cm ³ OR Method 2 • (M1) moles of benzoic acid in 1000 cm ³ • (M2) no. of moles of benzoic acid in 50 cm ³ then • (M3) evaluation of the number of molecules of	Method 1 • (M1) mass of benzoic acid in 50 cm ³ (1) • (M2) no. of moles of benzoic acid in 50 cm ³ (1) OR Method 2 • (M1) moles of benzoic acid in 1000 cm ³ (1) • (M2) no. of moles of benzoic acid in 50 cm ³ (1) then • (M3) evaluation of the number of molecules of	Method 1 Example of calculation • (M1) mass of benzoic acid in 50 cm ³ (1) • (M2) no. of moles of benzoic acid in 50 cm ³ (1) OR n=(0.0850 ÷ 122=) 6.967 x 10 ⁻⁴ (mol) Method 2 (M1) moles of benzoic acid in 1000 cm ³ (1) • (M2) no. of moles of benzoic acid in 50 cm ³ (1) $n=(1.70 ÷ 122 =) 0.01393 (mol)$ n=(0.01393 x 0.05 =) 6.967 x 10 ⁻⁴ (mol) then (M3) evaluation of the number of molecules of benzoic acid in 50 cm ³ (1) $N= (6.967 x 10-4 x 6.02 x 1023=)$ =4.19 x 10 ²⁰ / 4.2 x 10 ²⁰ gnore sf except 1sf Penalise excessive (6+) SF Allow use of 6.0 x 10 ²³ to give 4.18 x 10 ²⁰ for (3) (1)

Question Number	Answer	Additional Guidance	Mark
5(b)	A comparison that makes reference to		(2)
5(h)	• (melting temperature) is a (wide) range/ not sharp (1)	Ignore just lower for M1	
	• (it is lower) because impurities are present (1)	Allow water/phenol is present Allow 'it is not pure'	
		(Total Ownertian E	4.4

(Total Question 5 = 14 marks)

Question Number	Answer	Additional Guidance	Mark
6(a)	• correct formula (phenol) (1)	$\frac{\text{Example of equation}}{C_6H_5OH} + 7O_2 \rightarrow 6CO_2 + 3H_2O$	(2)
		Allow C ₆ H ₆ O	
	• • balanced equation (1)	Do not award [O] Ignore state symbols even if incorrect	

Question Number	Answer		Additional Guidance	Mark
6(b)(i)			Example of calculation	(3)
	mass of carbon in both substances	(1)	(12 x 7 =) 84	
	 molar masses of both substances 	(1)	Phenylmethanol 108 and Benzoic acid 122	
	 calculation of percentages by mass of carbon 	(1)	Phenylmethanol (84 ÷ 108) x100 = 78%/ 77.8%/ 77.78% / 77.7% Benzoic acid (84 ÷ 122) x 100 = 68.85%/ 68.9%/69%	
			Ignore sf except 1 Allow TE on incorrect M _r values Allow (2) for 11.1% and 9.8% calculated using 12 not 84 Allow 'rescue' (1) for one substance completely correct	

Question Number	Answer	Additional Guidance	Mark
6(b)(ii)	A description that makes reference to:		(1)
	 black smoke 	Allow Black fumes/soot/(yellow) smoky flame / grey smoke	
		Ignore carbon particulates	
		Do not award carbon monoxide/yellow flame	

Question Number	Answer	Additional Guidance	Mark
6(b)(iii)	An answer that makes reference to		(1)
	• Alkenes	Allow Cycloalkenes/cycloalkanes/alkynes/ carbon-carbon double bonds	
		Ignore Ethene/named alkenes/named alkynes	
		Do not award benzene/arenes	

Question Number	Answer	Additional Guidance	Mark
6(b)(iv)	An explanation that makes reference to		(2)
	• (window) above the safety line means the exhaust system is not strong enough to draw in the fumes (1)	Allow reverse argument Allow reference to exhaust/fan not able to prevent gas escaping	
	• so the toxic fumes will escape (into the laboratory) (1)	Allow poisonous/harmful/irritant/ carbon monoxide/soot for 'toxic fumes' Ignore reference to protection from splashing etc	

Question Number	Answer		Additional Guidance	Mark
6(c)(i)	An answer that makes reference to • (M1) (similarity) all have arene C–H absorptions Either 3030 (cm ⁻¹)		Bond and wavenumber ranges necessary for each mark	(5)
	or 750 and/or 700 (cm ⁻¹)	(1)	Do not award 880/830/780 (cm ⁻¹)	
	 (M2) only phenol and phenylmethanol have O-H 3750 - 3200 (cm⁻¹) 	(1)	Do not award –OH / C–OH by penalising once only in M2 and M3	
	• (M3) only benzoic acid has O-H 3300 - 2500 (cm ⁻¹)	(1)		
	• (M4) only benzoic acid has C=O 1700 - 1680 (cm ⁻¹)	(1)		
	 (M5) only phenylmethanol has alkane C–H absorptioneither 2962 - 2853 (cm⁻¹) 	ns		
	1485 - 1365 (cm ⁻¹)	(1)	All 5 correct bonds with no wavenumber ranges scores (3) 4 correct etc scores (2) and 3 correct etc scores (1)	
			All 5 correct wavenumber ranges with no bonds or incorrect bonds scores (3) 4 correct etc scores (2) and 3 correct etc scores (1)	
			Penalise any additional peaks once only Ignore references to different fingerprint regions	

Question Number	Answer	Additional Guidance M	Nark
6(c)(ii)	An answer that makes reference to	Allow any range within the stated ranges (Penalise single values as opposed to ranges once only Accept annotations on diagram	(3)
	• five peaks (in the ¹³ C NMR spectrum)	1)	
	 (four) aromatic peaks within the chemical shift range of 165 - 105 (ppm) 	(1)	
	 (one) peak (for the C-OH) within the chemical shift range of 75 - 55 (ppm) 	(1)	
		Penalise additional peaks once only when three or more types of peak are stated	

Question Number	Answer	Additional Guidance	Mark
f(c)(iii)	An answer that makes reference to	Example of a suitable formula	(2)
6(c)(iii)	• suitable formula of fragment ion (1)	$C_6H_5COO^+$ or $C_6H_5CO^+$ Do not award $C_7H_5O_2^+$ or $C_7H_5O^+$	
	• matching <i>m/z</i> value (1)	<i>m</i> / <i>z</i> = 121 or 105	
		Allow COOH ⁺ (1) Do not award bond to the fragment, e.g. –COOH ⁺	
		m/z = 45 (1)	
		No TE on incorrect fragment ions such as CH ₃ ⁺	

(Total Question 6 = 19 marks)

		Additional Guidance	Mark
logically structured answer with link reasoning. Marks are awarded for indicative con- structured and shows lines of reason The following table shows how the m indicative content. Number of indicative marking points seen in answer 6 5-4 3-2 1 0	ntent and for how the answer is ing. narks should be awarded for Number of marks awarded for indicative marking points 4 3 2 1 0 narks should be awarded for Number of marks awarded	Guidance on how the mark scheme should be applied: The mark for indicative content should be added to the mark for lines of reasoning. For example, a response with four indicative marking points that is partially structured with some linkages and lines of reasoning scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning). If there were no linkages between the points, then the same indicative marking points would yield and overall score of 3 marks (3 marks for indicative content and zero marks for linkages). Penalise incorrect chemistry such as bond angles of 90° for tetrahedral complexes or incorrect oxidation number by deducting a reasoning mark	(6)
Answer shows a coherent logical structure with linkages and fully sustained lines of reasoning demonstrated throughout Answer is partially structured with some linkages and lines of reasoning Answer has no linkages between points and is unstructured	for structure of answer and sustained lines of reasoning 2 1 0		
	Aarks are awarded for indicative cor tructured and shows lines of reason The following table shows how the medicative content. Number of indicative marking points seen in answer 6 5-4 3-2 1 0 The following table shows how the metructure and lines of reasoning Answer shows a coherent logical structure with linkages and fully sustained lines of reasoning demonstrated throughout Answer is partially structured with some linkages and lines of reasoning Answer has no linkages between	easoning. Marks are awarded for indicative content and for how the answer is tructured and shows lines of reasoning. The following table shows how the marks should be awarded for ndicative content. Number of indicative marking points seen in answer 6 4 5-4 3 3-2 2 1 1 1 0 0 The following table shows how the marks should be awarded for tructure and lines of reasoning Answer shows a coherent logical structure with linkages and fully sustained lines of reasoning Answer is partially structured with some linkages and lines of reasoning Answer has no linkages between 0	easoning.warks are awarded for indicative content and for how the answer is tructured and shows lines of reasoning.mark for lines of reasoning. For example, a response with four indicative marking points that is partially structured with some linkages and lines of reasoning scores 4 marks (3 marks for indicative content and 1 mark for partial structure and some linkages and lines of reasoning).Number of indicative marking points seen in answerNumber of marks awarded for indicative marking points645-435-433-221100*he following table shows how the marks should be awarded for indicative marking points1100*he following table shows how the marks should be awarded for structure of answer and sustained lines of reasoningAnswer shows a coherent logical structure with linkages and fully sustained lines of reasoning demonstrated throughoutAnswer is partially structured with some linkages between1Answer is partially structured with some linkages between1Answer has no linkages between0

In	dicative content	Accept any six indicative content points
	• IP1 formulae and colour of first complex ion	More than one indicative marking point may be made within the same comment or explanation $[Co(H_2O)_6]^{2+}$
		allow [Co(NH ₃) ₆] ²⁺ or [Co(EDTA)] ²⁻ or [Co(en) ₃] ²⁺ and pink or yellow/brown for the hexaamine complex
	• IP2 formulae and colour of second complex ion	[CoCl ₄] ²⁻ allow [Co(OH) ₄] ²⁻ and blue
	IP3 definition of ligand	Atom/ion/molecule/species dative covalently bonded/ coordinately bonded to a central metal ion which can be shown on a diagram
	• IP4 definition of and example(s) of coordination number	The number of dative covalent bonds (to a central metal ion) and Six and/or four respectively which may be in a diagram
	• IP5 shape of complex ion(s)	Octahedral and/or tetrahedral respectively and can be a diagram. If two given then both must be correct
	• IP6 the chloride ion is larger (than the oxygen in water ligand or nitrogen in the ammonia ligand)	Allow chloride ions are large and only fit four around the metal ion Do not award 'molecule' when referring to chlorine Accept reverse argument
		the metal ion Do not award 'molecule' when referring to c

Total Question 7 = 6 marks)

Question Number	Answer		Additional Guidance	Mark
8(a)	A description that makes reference to			(2)
	• green ppt.	(1)	Accept 'green solid' Allow 'grey-green ppt Do not award blue-green	
	• ppt dissolves (in excess NaOH) to give a green solution	(1)	Ignore shades M2 dependent upon M1 or near-miss	

Question Number	Answer		Additional Guidance	Mark
8(b)(i)			An example of equation	(2)
	four correct species	(1)	$[Cr(OH)_6]^{3-} + 2OH^- \rightarrow CrO_4^{2-} + 4H_2O + 3e^-$	
	• balancing and the correct number of electrons	(1)	Accept multiples	

Question Number	Answer	Additional Guidance	Mark
8(b)(ii)		An example of equation	(1)
	• equation	$2CrO_4^{2-} + 2H^+ \rightarrow Cr_2O_7^{2-} + H_2O$	
		Accept ≓ / multiples	

Question Number	Answer		Additional Guidance	Mark
8(b)(iii)	oxidation half equation	(1)	$H_2O_2 \rightarrow 2H^+ + O_2 + 2e^-$	(3)
	reduction half equation	(1)	$Cr_2O_7^{2-} + 14H^+ + 6e^- \rightarrow 2Cr^{3+} + 7H_2O$	
	overall equation	(1)	$Cr_2O_7{}^{2-}$ + 8H^+ + 3H_2O_2 \rightarrow 2Cr^{3+} + 7H_2O+ 3O_2 for M3 do not award if H^+/ e^ left on both sides	
			Accept multiples Allow ≓ Ignore state symbols even if incorrect	
			Oxidation and reduction half equations scores (2) if not identified but in correct order Award (1) only for M1 and M2 if half equations are not in correct order	
			No TE on incorrect half equations	

8(c) A diagram that includes Example of diagram (7 8(c) A diagram that includes Example of diagram (7 9 (M1) (high resistance) voltmeter/V (1) (M2) salt bridge to complete circuit (1) 9 (M3) filter paper soaked in (saturated) potassium nitrate/KNO3 solution (1) Salt bridge must dip into the solutions Allow sodium chloride/potassium chloride for potassium nitrate 9 (M4) zinc electrode of zinc metal and suitable zinc salt (1) e.g. ZnSO4 e.g. ZnSO4	Question Number	Answer		Additional Guidance	Mark
 (M7) all solutions to be 1 mol dm⁻³ (wrt ions) (1) if Cr₂(SO₄)₃ is used then M7 can only be awarded if its concentration is 0.5 mol dm⁻³ Allow electrodes drawn the other way round Ignore temperature is 298 K Penalise use of just names once only 		 A diagram that includes (M1) (high resistance) voltmeter/V (M2) salt bridge to complete circuit (M3) filter paper soaked in (saturated) potassium nitrate/KNO₃ solution (M4) zinc electrode of zinc metal and suitable zinc salt (M5) platinum (black) electrode (M6) suitable chromium salts (M7) all solutions to be 1 mol dm⁻³ 	 (1) (1) (1) (1) (1) (1) 	Example of diagram Veloceter Ve	(7)

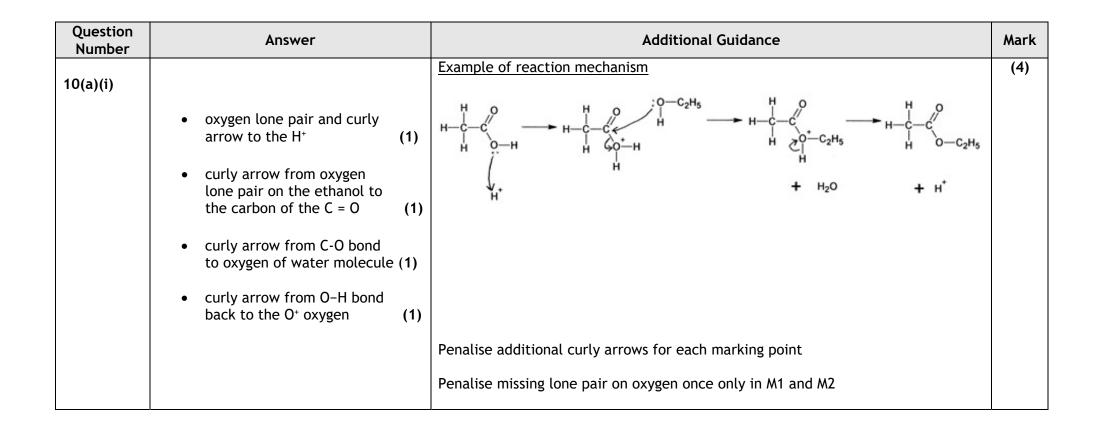

Question Number	Answer		Additional Guidance	Mark
9(2)	An answer that makes reference to			(3)
9(a)	• (similarity) both are reduction reactions	(1)	Ignore both require hydrogen	
	• (difference 1) reagents for preparation of phenylamine are tin and (conc.) hydrochloric acid	(1)	Allow Iron for tin Do not award dilute hydrochloric acid/ sulfuric acid	
	 (difference 2) reagents for preparation of butylamine are either Hydrogen gas and nickel catalyst or lithium tetrahydridoaluminate(III) and (dry) ether 	(1)	Lithium aluminium hydride / Lithal / LiAlH4	

Question Number	Answer	Additional Guidance	Mark
0(b)	An answer that makes reference to:	Diagrams can be used to score	(3)
9(b)	 (similarity) both are basic because they have a lone pair of electrons on the nitrogen atom which accepts a proton (1) (difference 1)in C₆H₅NH₂ the lone pair of electrons of the nitrogen atom becomes incorporated with the delocalised ring of electrons and so is less able to accept a proton 		
	hence a weaker base (1)		
	 (difference 2) the alkyl group/ C₄H₉ is electron-releasing / positively inductive and means the lone pair of electrons of the nitrogen atom are more able to accept a proton hence a stronger base(1) 		
		Comparison of basicity/nitrogen's lone pair of electrons/proton acceptance only need to be mentioned once.	

Question Number	Answer	Additional Guidance	Mark
9(c)	• equation (1	$\begin{array}{c} C_{2}H_{5}COCl + C_{5}H_{11}NH_{2} \rightarrow C_{2}H_{5}CONHC_{5}H_{11} + HCl \\ or \\ H_{5}C_{2}-C \\ Cl \\ H_{11}C_{5} \\ Cl \\ H_{11}C_{5} \\ H_{11}$	(2)
	• name (1)	N-pentylpropanamide Do not award N-pentylpropylamine	

Question Number	Answer	Additional Guidance	Mark
9(d)	• amine monomer structure or name	H ₂ N(CH ₂) ₆ NH ₂ / 1,6-diaminohexane Accept any mixture of displayed, structural or skeletal formulae Do not award molecular formulae or H ₂ N C ₆ H ₁₂ NH ₂ If name and formula given then both must be correct	(1)

(Total Question 9 = 9 marks)

Question Number	Answer	Additional Guidance	Mark
10(a)(ii)	• correct oxygen identified (1)	н 	(2)
	 the single bond C-O in the carboxylic acid breaks rather than the one in ethanol 	Allow 'loss of OH from the carboxylic acid'	
	or		
	the oxygen in ethanol acts as the nucleophile (to attack the carbon of the carboxylic acid group and so ends up in the ester) (1)		

Question Number	Answer		Additional Guidance	
10(a)(iii)			Example of calculation	(6)
	• (M1) calculation of ΔG	(1)	$\Delta G = -RT \ln K = -8.31 \times 298 \times \ln 4.0$ = -3433 (J mol ⁻¹)	
	(M2) correct equation	(1)	$\Delta G = \Delta H - T \Delta S_{system}$	
	• (M3) rearrangement of equation	(1)	$\Delta S_{system} = (\Delta H - \Delta G) \div T$	
	• (M4) calculation of ΔS_{system}	(1)	$\Delta S_{system} = (-6.0 \times 10^{3} - (-3433)) \div 298$ = -8.614 (J mol ⁻¹ K ⁻¹)	
	• (M5) rearrangement of equation so S _(ethyl ethanoate) =	(1)		
	• (M6) calculation of $S_{(ethyl ethanoate)}$ with sign and units	(1)	S _(ethyl ethanoate) = (-8.614 + (159.8+160.7) - 69.9) = +242/240 J mol ⁻¹ K ⁻¹	
			Ignore SF except 1SF	
			Correct final answer without working scores (6)	
			TE throughout	

Question Number	Answer		Additional Guidance	Mark
10(b)	 A comparison that makes reference to: (with ethanoyl chloride) the reaction is irreversible compared to reversible hydrogen chloride is the by-product rather than water the reaction is very fast/occurs at room temperature so an acid catalyst is not needed 	(1) (1) (1)	Accept reverse arguments Allow steamy fumes for 'HCl'	(3)
