Version: 1.1 Final Mark Scheme

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from [aqa.org.uk](http://aqa.org.uk)

#### Copyright information

AQA retains the copyright on all its publications. However, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

## Mark scheme instructions to examiners

### General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- marking instructions that indicate when marks should be awarded or withheld including the principle on which each mark is awarded. Information is included to help the examiner make his or her judgement and to delineate what is creditworthy from that not worthy of credit
- a typical solution. This response is one we expect to see frequently. However credit must be given on the basis of the marking instructions.

If a student uses a method which is not explicitly covered by the marking instructions the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

### Key to mark types

M	mark is for method
R	mark is for reasoning
A	mark is dependent on M marks and is for accuracy
B	mark is independent of M marks and is for method and accuracy
E	mark is for explanation
F	follow through from previous incorrect result

### Key to mark scheme abbreviations

CAO	correct answer only
CSO	correct solution only
ft	follow through from previous incorrect result
'their'	Indicates that credit can be given from previous incorrect result
ISW	Ignore subsequent working
AWFW	anything which falls within
AWRT	anything which rounds to
ACF	any correct form
AG	answer given
SC	special case
OE	or equivalent
NMS	no method shown
PI	possibly implied
sf	significant figure(s)
dp	decimal place(s)

**AS/A-level Maths/Further Maths assessment objectives**

<b>AO</b>		<b>Description</b>
<b>AO1</b>	AO1.1a	Select routine procedures
	AO1.1b	Correctly carry out routine procedures
	AO1.2	Accurately recall facts, terminology and definitions
<b>AO2</b>	AO2.1	Construct rigorous mathematical arguments (including proofs)
	AO2.2a	Make deductions
	AO2.2b	Make inferences
	AO2.3	Assess the validity of mathematical arguments
	AO2.4	Explain their reasoning
	AO2.5	Use mathematical language and notation correctly
<b>AO3</b>	AO3.1a	Translate problems in mathematical contexts into mathematical processes
	AO3.1b	Translate problems in non-mathematical contexts into mathematical processes
	AO3.2a	Interpret solutions to problems in their original context
	AO3.2b	Where appropriate, evaluate the accuracy and limitations of solutions to problems
	AO3.3	Translate situations in context into mathematical models
	AO3.4	Use mathematical models
	AO3.5a	Evaluate the outcomes of modelling in context
	AO3.5b	Recognise the limitations of models
	AO3.5c	Where appropriate, explain how to refine models

Examiners should consistently apply the following general marking principles

### No Method Shown

Where the question specifically requires a particular method to be used, we must usually see evidence of use of this method for any marks to be awarded.

Where the answer can be reasonably obtained without showing working and it is very unlikely that the correct answer can be obtained by using an incorrect method, we must award **full marks**. However, the obvious penalty to students showing no working is that incorrect answers, however close, earn **no marks**.

Where a question asks the student to state or write down a result, no method need be shown for full marks.

Where the permitted calculator has functions which reasonably allow the solution of the question directly, the correct answer without working earns **full marks**, unless it is given to less than the degree of accuracy accepted in the mark scheme, when it gains **no marks**.

**Otherwise we require evidence of a correct method for any marks to be awarded.**

### Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

### Work erased or crossed out

Erased or crossed out work that is still legible and has not been replaced should be marked. Erased or crossed out work that has been replaced can be ignored.

### Choice

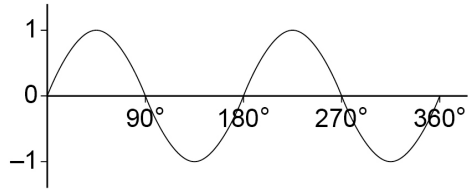

When a choice of answers and/or methods is given and the student has not clearly indicated which answer they want to be marked, mark positively, awarding marks for all of the student's best attempts. Withhold marks for final accuracy and conclusions if there are conflicting complete answers or when an incorrect solution (or part thereof) is referred to in the final answer.

Q	Marking instructions	AO	Marks	Typical solution
1	Circles correct answer	1.1b	B1	$ x  < 4$
Question 1 Total			1	

Q	Marking instructions	AO	Marks	Typical solution
2	Ticks correct box	3.1a	B1	$\int_0^5 (5x - x^2) dx$
Question 2 Total			1	

Q	Marking instructions	AO	Marks	Typical solution
3	Circles correct answer	3.1a	B1	$x = -1$
Question 3 Total			1	

Q	Marking instructions	AO	Marks	Typical solution
4	Integrates one $x$ term correctly Accept unsimplified terms	1.1a	M1	$\frac{x^3}{3} + \frac{2x^{\frac{3}{2}}}{3} + c$
	Obtains correct answer ACF Must include $+ c$ Accept unsimplified terms Do not ISW	1.1b	A1	
Question 4 Total			2	

Q	Marking instructions	AO	Marks	Typical solution
<b>5(a)</b>	Sketches sine wave with correct orientation through the origin to at least one period Ignore any numbers on $y$ -axis	1.1a	M1	
	Sketches $y = \sin 2x$ through the correct axes intersections Condone only slight difference in amplitudes Ignore any numbers on $y$ -axis Ignore any sections of the graph outside of $0^\circ \leq x \leq 360^\circ$	1.1b	A1	
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>5(b)</b>	Deduces correct values of $A$ CAO	2.2a	B1	$\pm 1$
	<b>Subtotal</b>		<b>1</b>	

	<b>Question 5 Total</b>		<b>3</b>	
--	-------------------------	--	----------	--

Q	Marking instructions	AO	Marks	Typical solution
<b>6(a)</b>	Substitutes $t = 9.5$ into $x = -2t^2$ or $2t^2$	3.4	M1	$t = 9.5 \Rightarrow x = -2 \times 9.5^2 = -180.5$
	Obtains 180.5 Condone incorrect or missing units ISW	1.1b	A1	Length = 180.5 cm
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>6(b)(i)</b>	Obtains $9 - 1.4t$ or $-4t$ OE Ignore labels	1.1b	B1	$\frac{dy}{dt} = 9 - 1.4t$
	Uses chain rule to obtain $\frac{dy}{dx}$ Condone sign error	3.1a	M1	$\frac{dx}{dt} = -4t$ $\frac{dy}{dx} = \frac{dy}{dt} \times \frac{dt}{dx}$
	Obtains a correct expression Do not ISW	1.1b	A1	$\frac{dy}{dx} = \frac{9 - 1.4t}{-4t}$
	<b>Subtotal</b>		<b>3</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>6(b)(ii)</b>	Equates their $\frac{dy}{dx}$ or their $\frac{dy}{dt}$ or  their numerator of their $\frac{dy}{dx}$ to 0  PI by correct $t$ from correct $\frac{dy}{dx}$	3.1a	M1	$\frac{9-1.4t}{-4t} = 0$  $t = \frac{45}{7} = 6.43$  $y = 9 \times 6.43 - 0.7 \times (6.43)^2$ $= 28.9$
	Obtains correct value for $t$ ACF eg $t = 6.4$ or $\frac{9}{1.4}$  Must come from correct $\frac{dy}{dx}$	1.1b	A1	Width of surfboard = 58 cm  $180.5 \div 3 = 60.2 \approx 58$  Hence the width is approximately one third of the length
	Substitutes their value for $t$ into the model for $y$ and obtains a value for $y$ provided $0 < t < 9.5$	3.4	M1	
	Compares correct width and correct length and $\frac{1}{3}$ or 3 with a correct concluding statement OE CSO Allow 180 for length	3.2a	R1	
	<b>Subtotal</b>		<b>4</b>	
	<b>Question 6 Total</b>		<b>9</b>	

Q	Marking instructions	AO	Marks	Typical solution
7(a)(i)	Forms a correct expression for the gradient or sets up two correct simultaneous equations PI by $a = -0.7$ or $b = 1.5$ Ignore missing labels	1.1a	M1	$\frac{4.49 - 1.94}{3.46 - 1.76} = 1.5$ $\log_{10} T - 1.94 = 1.5(\log_{10} d - 1.76)$ $\log_{10} T = -0.7 + 1.5\log_{10} d$
	Obtains $a = -0.7$ or $b = 1.5$ OE Ignore missing labels	1.1b	A1	
	Obtains $a = -0.7$ and $b = 1.5$ or seen in the logarithmic equation ISW	1.1b	A1	
	<b>Subtotal</b>		<b>3</b>	

Q	Marking instructions	AO	Marks	Typical solution
7(a)(ii)	Uses one law of logarithm correctly Allow use of original equation without values for $a$ and $b$ If values are used, $a \neq 0$	3.3	M1	$\log_{10} T - \log_{10} d^{1.5} = -0.7$ $\log_{10} \left( \frac{T}{d^{1.5}} \right) = -0.7$ $\frac{T}{d^{1.5}} = 10^{-0.7}$ $T = 10^{-0.7} \times d^{1.5}$
	Completes reasoned argument to obtain $T = Kd^n$ with $K = 10^{-0.7}$ or AWRT 0.2 and $n = 1.5$ ISW Must come from correct working	2.1	R1	
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
7(b)	Forms an equation using their answer to <b>(a)(ii)</b> with $K > 0$ and $n > 0$ and $T = 60\,000$ Must only have unknown $d$ in the equation	3.4	M1	$60\,000 = 0.2 \times d^{1.5}$ $d = 4488.5$ <p>Average distance is approximately 4500 million kilometres</p>
	Obtains AWRT 4500 million kilometres ACF with units For example <ul style="list-style-type: none"> <li><math>4.5 \times 10^9</math> kilometres</li> <li><math>4500 \times 10^6</math> kilometres</li> <li><math>4.5 \times 10^{12}</math> metres</li> <li><math>4500 \times 10^9</math> metres</li> </ul>	3.2a	A1	
	<b>Subtotal</b>		<b>2</b>	
	<b>Question 7 Total</b>		<b>7</b>	

Q	Marking instructions	AO	Marks	Typical solution
8(a)	Obtains $\frac{dV}{dh} = \frac{3\pi h^2}{12}$ or $\frac{\pi h^2}{4}$ OE Condone missing or incorrect labels	1.1b	B1	
	Obtains $v = 8 \times 3$ or 24 Can be embedded eg 288 or $96 \times 3$	3.1b	B1	$\frac{dV}{dh} = \frac{3\pi h^2}{12} = \frac{\pi h^2}{4}$  When $t = 3$
	Equates their 24 to $\frac{\pi h^3}{12}$  to obtain $h = \sqrt[3]{\frac{24 \times 12}{\pi}}$ or $h^2 = \left(\frac{288}{\pi}\right)^{\frac{2}{3}}$  Can be embedded Condone decimal values $h = 4.51$ $h^2 = 20.3$	1.1b	M1	$V = \frac{\pi h^3}{12} = 24$  $\Rightarrow h = \left(\frac{288}{\pi}\right)^{\frac{1}{3}}$  $\frac{dV}{dh} = \frac{\pi}{4} \left(\frac{288}{\pi}\right)^{\frac{2}{3}}$  $= \pi^{\frac{1}{3}} \times \frac{1}{4} \times 82944^{\frac{1}{3}}$  $= \sqrt[3]{1296\pi}$  $= \sqrt[3]{216 \times 6\pi}$  $= 6\sqrt[3]{6\pi}$
	Completes reasoned argument to show given result AG Must include $\frac{dV}{dh}$ with at least one intermediate step without 288  Must not include incorrect working in the manipulation	2.1	R1	
Subtotal			4	

Q	Marking instructions	AO	Marks	Typical solution
8(b)	States any correct chain rule connecting $\frac{dV}{dt}$ , $\frac{dV}{dh}$ and $\frac{dh}{dt}$ PI by $\frac{8}{6\sqrt[3]{6\pi}}$ or correct answer or states that $h = \sqrt[3]{\frac{96t}{\pi}}$	3.1b	M1	$\frac{dh}{dt} = \frac{dV}{dt} \times \frac{dh}{dV}$ $\Rightarrow \frac{dh}{dt} = \frac{8}{6\sqrt[3]{6\pi}}$ $= 0.501 \text{ cm s}^{-1}$
	Substitutes $\frac{dV}{dt} = 8$ and $\frac{dV}{dh} = 6\sqrt[3]{6\pi}$ in their chain rule PI by $\frac{8}{6\sqrt[3]{6\pi}}$ or correct answer or substitutes $t = 3$ in their $\frac{dh}{dt} = \left(\frac{96}{\pi}\right)^{\frac{1}{3}} \times \frac{t^{-2/3}}{3}$ ACF	1.1a	M1	
	Obtains correct $\frac{dh}{dt}$ AWR 0.501 cm/s Must be at least 3sf with correct unit <b>cm/s</b> or <b>cm s<sup>-1</sup></b>	3.2a	A1	
	<b>Subtotal</b>		<b>3</b>	
	<b>Question 8 Total</b>		<b>7</b>	

Q	Marking instructions	AO	Marks	Typical solution
9(a)	<p>Begins argument with either of:</p> <ul style="list-style-type: none"> <li>Factorises <math>-4b-2</math> or <math>4b+2</math> correctly to <math>2b+1</math> as a factor</li> <li>States <math>4b</math> and <math>2</math> are both even or</li> </ul> <p>begins proof by contradiction by assuming <math>a</math> is odd therefore <math>a^2</math> is odd</p>	2.1	M1	$a^2 - 4b - 2 = 0$ $a^2 = 4b + 2$ $a^2 = 2(2b + 1)$ <p>Hence <math>a^2</math> must be even, which means that <math>a</math> must be even</p>
	<p>Completes reasoned argument by deducing that <math>a^2</math> must be even or has a factor of 2, which means that <math>a</math> must be even or</p> <p>Completes reasoned argument by deducing that <math>a^2 = 4b+2</math> which is even because <math>4b</math> and <math>2</math> are both even hence <math>a^2</math> is even which is a contradiction OE</p>	2.2a	R1	
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
9(b)	Uses $2p$ and obtains $(2p)^2$ PI by $4p^2$ Allow any letter for $p$ except $a$ and $b$	1.1a	M1	$a = 2p \Rightarrow (2p)^2 = 4p^2$ $4p^2 = 2(2b+1)$ $2p^2 = 2b+1$  Hence $2b+1$ must be even  $2b+1$ is an odd number which is a contradiction
	Obtains either $4p^2 = 2(2b+1)$ or $4p^2 = 4b+2$ and followed by $2p^2 = 2b+1$ or $4p^2 = 2(2b+1)$ or $4p^2 = 4b+2$ and followed by $2 \times 2p^2 = 2(2b+1)$	3.1a	A1	
	Complete reasoned argument by deducing that $2b+1$ is even hence contradiction as $2b+1$ is an odd number or Complete reasoned argument by deducing that $2b+1$ is even hence contradiction as $b$ cannot be an integer	2.2a	R1	
	<b>Subtotal</b>		<b>3</b>	

Q	Marking instructions	AO	Marks	Typical solution
9(c)	Deduces that there are no solutions to $a^2 - 4b - 2 = 0$ where $a$ and $b$ are integers	2.2a	R1	There are no solutions to $a^2 - 4b - 2 = 0$ where $a$ and $b$ are integers
	<b>Subtotal</b>		<b>1</b>	

	<b>Question 9 Total</b>		<b>6</b>	
--	-------------------------	--	----------	--

Q	Marking instructions	AO	Marks	Typical solution
10(a)	States –2.5 OE	2.2a	B1	–2.5
	<b>Subtotal</b>		<b>1</b>	

Q	Marking instructions	AO	Marks	Typical solution
10(b)	Explains that many-to-one function is when distinct values of $x$ give the same value for $y$	2.4	E1	Many-to-one function is when two or more $x$ values give the same $y$ value.
	Uses the shape of the graph to justify their answer or gives an example of two $x$ values eg $f(0) = f(4)$ or states turning or minimum or maximum points indicate many-to-one	2.4	E1	This graph is many-to-one because you can draw a horizontal line and it will cross the graph twice.
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
10(c)(i)	Equates $x$ and $\frac{x^2 + 10}{2x + 5}$	3.1a	M1	$x = \frac{x^2 + 10}{2x + 5}$
	Rearranges with at least one intermediate step to obtain quadratic equation AG Condone $0 = x^2 + 5x - 10$	2.1	R1	$x(2x + 5) = x^2 + 10$ $2x^2 + 5x = x^2 + 10$ $x^2 + 5x - 10 = 0$
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
10(c)(ii)	Obtains $\frac{-5 \pm \sqrt{65}}{2}$ Ignore any labels ISW	1.1b	B1	$x = \frac{-5 \pm \sqrt{65}}{2}$
	<b>Subtotal</b>		<b>1</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>10(d)</b>	Uses quotient rule to obtain an expression in the form of $\frac{Ax(2x+5) + B(x^2+10)}{(2x+5)^2}$ or uses product rule to obtain an expression in the form of $Cx(2x+5)^{-1} + D(x^2+10)(2x+5)^{-2}$ or uses implicit differentiation to obtain an equation of the form $Ax \frac{dy}{dx} + By + C \frac{dy}{dx} = Dx$ A, B, C and D can be any values but not 0 Condone missing brackets	3.1a	M1	$f'(x) = \frac{2x(2x+5) - 2(x^2+10)}{(2x+5)^2}$ $= \frac{2x^2 + 10x - 20}{(2x+5)^2}$ $f'(x) = 0 \Leftrightarrow 2x^2 + 10x - 20 = 0$ $x^2 + 5x - 10 = 0$ <p>This is the same equation solved in part c(i) so P and Q must be stationary points.</p>
	Obtains fully correct $f'(x)$ or obtains $2x \frac{dy}{dx} + 2y + 5 \frac{dy}{dx} = 2x$ ACF May be unsimplified	1.1b	A1	
	Equates their $f'(x)$ or their numerator of $f'(x)$ to 0 or sets $\frac{dy}{dx} = 0$	1.1a	M1	
	Rearranges to obtain $x^2 + 5x - 10 = 0$ or $2x^2 + 10x - 20 = 0$ and links it to the equation in part c(i) or their answer to c(ii) or solves their quadratic $f'(x) = 0$ correctly or deduces $y = x$ and substitutes to get $x = \frac{x^2+10}{2x+5}$ then rearranges to get $x^2 + 5x - 10 = 0$	1.1a	M1	

	Completes a reasoned argument by using $x = \frac{-5 \pm \sqrt{65}}{2}$ to conclude that $P$ and $Q$ are stationary points  CSO  Must have brackets correct throughout	2.1	R1	
	<b>Subtotal</b>		<b>5</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>10(e)</b>	Deduces critical regions from their answer to <b>c(ii)</b> condone strict inequalities or poor notation or decimal values	2.2a	M1	$x \leq \frac{-5 - \sqrt{65}}{2} \quad \text{and} \quad x \geq \frac{-5 + \sqrt{65}}{2}$ $\left\{ x : x \leq \frac{-5 - \sqrt{65}}{2} \right\} \cup \left\{ x : x \geq \frac{-5 + \sqrt{65}}{2} \right\}$
	Writes correct range in correct set notation eg $\left( -\infty, \frac{-5 - \sqrt{65}}{2} \right] \cup \left[ \frac{-5 + \sqrt{65}}{2}, \infty \right)$  Accept other letters for $x$ or using $f(x)$ provided consistent throughout set Follow through their answer to <b>c(ii)</b>	2.5	A1F	
	<b>Subtotal</b>		<b>2</b>

12	Circles correct answer	2.2a	B1	Positively skewed
<b>Question 12 Total</b>			<b>1</b>	

Q	Marking instructions	AO	Marks	Typical solution
13	<p>Makes a valid comment about the sample of vehicles in LDS</p> <p>For example</p> <ul style="list-style-type: none"> <li>not all (UK/England) regions included</li> <li>not all types of vehicles included</li> <li>some missing CO<sub>2</sub> data</li> </ul>	2.2b	E1	<p>The Large Data Set is only a sample of vehicles in the UK.</p> <p>The Large Data Set only has data for 2002 and 2016</p>
	<p>Makes a valid comment about the data years in LDS</p> <p>For example</p> <ul style="list-style-type: none"> <li>data shown only for two years but nothing in between</li> </ul>	2.2b	E1	
<b>Question 13 Total</b>			<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
14(a)	States one of the following assumptions in context <ul style="list-style-type: none"> <li>probability of complaint call is constant</li> <li>calls or complaint calls occur independently of each other or have no effect on each other</li> <li>only two outcomes of complaint or non-complaint calls</li> </ul> Condone 'complaint' for 'complaint call' Do not allow probability being independent Do not allow fixed number of calls	3.5b	B1	The probability of getting a complaint call is fixed  Calls occur independently of each other
	States a second assumption in context	3.5b	B1	
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
14(b)(i)	Calculates the correct probability ACF AWFW [0.0068, 0.007]	1.1b	B1	0.00684
	<b>Subtotal</b>		<b>1</b>	

Q	Marking instructions	AO	Marks	Typical solution
14(b)(ii)	Finds $P(X \leq 4)$ or $P(X \leq 3)$ PI by 0.2375 or 0.107 Allow figures to 2sf	1.1a	M1	$P(X \leq 3) = 0.107$
	Obtains correct probability ACF AWFW [0.107, 0.11]	1.1b	A1	
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>14(b)(iii)</b>	Finds their $P(X \leq 9)$ or $P(X \leq 10)$ or $P(X \geq 10)$ or $P(X > 10)$ PI by 0.952 or 0.983 or 0.0172 or correct answer Allow figures to 2sf	1.1a	M1	$P(X \geq 10) = 1 - P(X \leq 9)$ $= 1 - 0.952$ $= 0.048$
	Obtains correct probability ACF AWFW [0.0479, 0.048]	1.1b	A1	
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>14(c)</b>	Uses $np(1-p)$	1.1a	M1	$10p(1-p) = 1.5^2$ $-10p^2 + 10p - 2.25 = 0$ $p = 0.34 \text{ and } 0.66$
	Forms a correct equation in $p$ using 10 and 1.5 ACF	3.1a	A1	
	Obtains values for $p$ ACF ISW Allow AFWF [0.34, 0.342] and [0.658, 0.66] for $p$ or $p = \frac{10 \pm \sqrt{10}}{20}$	1.1b	A1	
	<b>Subtotal</b>		<b>3</b>	

	<b>Question 14 Total</b>		<b>10</b>	
--	--------------------------	--	-----------	--

Q	Marking instructions	AO	Marks	Typical solution
<b>15(a)</b>	States the correct population Allow 'people' or 'names' or 'members' for adults Must see electoral register	3.3	B1	Adults on the electoral register
	<b>Subtotal</b>		<b>1</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>15(b)(i)</b>	Recalls correct name for sampling method	1.2	B1	Systematic sampling
	<b>Subtotal</b>		<b>1</b>	

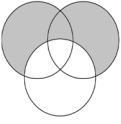

Q	Marking instructions	AO	Marks	Typical solution
<b>15(b)(ii)</b>	States one advantage that sampling method For example <ul style="list-style-type: none"> <li>• easy to carry out or quick</li> <li>• no bias or it is fair</li> <li>• reduce chance of cluster</li> </ul> Do not accept random Do not ignore incorrect statement	3.5b	E1	Cheap to collect
	<b>Subtotal</b>		<b>1</b>	

	<b>Question 15 Total</b>		<b>3</b>	
--	--------------------------	--	----------	--

Q	Marking instructions	AO	Marks	Typical solution
<b>16(a)</b>	Writes at least two of 4, 15, 17 or 31 in the correct place	1.1a	M1	
	Obtains either 7 or 9 in the correct place	1.1b	A1	
	Completes the Venn diagram fully correctly including 56	1.1b	A1	
	<b>Subtotal</b>		<b>3</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>16(b)(i)</b>	Obtains the correct probability AFWW [0.42, 0.421] Ignore subsequent incorrect simplification once correct fraction or decimals obtained	1.1b	B1	$\frac{101}{240}$
	<b>Subtotal</b>		<b>1</b>	

Q	Marking instructions	AO	Marks	Typical solution
<b>16(b)(ii)</b>	Adds their $4 + 15 + 17 + 31$  PI by correct answer OE The total is not required at this stage	1.1a	M1	$4 + 15 + 17 + 31 = 67$ $\frac{67}{240}$
	Obtains the correct probability AFWW [0.279, 0.28] Ignore subsequent incorrect simplification once correct fraction or decimals obtained	1.1b	A1	
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
16(b)(iii)	Adds their $101 + 31 + 7$  PI by correct answer OE The total is not required at this stage	1.1a	M1	$101 + 31 + 7 = 139$  $\begin{array}{r} 139 \\ \hline 195 \end{array}$
	Obtains the correct probability AFWF [0.71, 0.713] Ignore subsequent incorrect simplification once correct fraction or decimals obtained	1.1b	A1	
	<b>Subtotal</b>		<b>2</b>	

Q	Marking instructions	AO	Marks	Typical solution
16(c)	Finds correct $P(C) \times P(T)$ or uses correct conditional probability eg $P(T C) = \frac{21}{153}$ OE All figures must be correct	3.1b	M1	$P(C) \times P(T) = \frac{153}{240} \times \frac{45}{240} = \frac{153}{1280}$ $= 0.12$  $P(C \cap T) = \frac{21}{240}$ $= 0.0875$  $0.12 \neq 0.0875$
	Compares $P(C \cap T) = \frac{21}{240}$ with $\frac{153}{1280}$ and concludes owning a cat and owning a tortoise are not independent  eg $\frac{21}{240} \neq \frac{153}{1280}$ so not independent or compares conditional probability eg $\frac{21}{153} \neq \frac{45}{240}$ so not independent  All figures must be correct	2.2a	R1	
	<b>Subtotal</b>		<b>2</b>
