

GCSE (9-1)

Chemisty B (Twenty First Century Science)

J258/02: Depth in chemistry (Foundation Tier)

General Certificate of Secondary Education

Mark Scheme for June 2019

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

Annotations available in RM Assessor

Annotation	Meaning
✓	Correct response
×	Incorrect response
^	Omission mark
BOD	Benefit of doubt given
CON	Contradiction
RE	Rounding error
SF	Error in number of significant figures
ECF	Error carried forward
L1	Level 1
L2	Level 2
L3	Level 3
NBOD	Benefit of doubt not given
SEEN	Noted but no credit given
I	Ignore

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

Annotation	Meaning
1	alternative and acceptable answers for the same marking point
√	Separates marking points
DO NOT ALLOW	Answers which are not worthy of credit
IGNORE	Statements which are irrelevant
ALLOW	Answers that can be accepted
()	Words which are not essential to gain credit
_	Underlined words must be present in answer to score a mark
ECF	Error carried forward
AW	Alternative wording
ORA	Or reverse argument

Subject-specific Marking Instructions

INTRODUCTION

Your first task as an Examiner is to become thoroughly familiar with the material on which the examination depends. This material includes:

- the specification, especially the assessment objectives
- the question paper
- the mark scheme.

You should ensure that you have copies of these materials.

You should ensure also that you are familiar with the administrative procedures related to the marking process. These are set out in the OCR booklet **Instructions for Examiners**. If you are examining for the first time, please read carefully **Appendix 5 Introduction to Script Marking: Notes for New Examiners**.

Please ask for help or guidance whenever you need it. Your first point of contact is your Team Leader.

The breakdown of Assessment Objectives for GCSE (9-1) in Chemistry.

	Assessment Objective
AO1	Demonstrate knowledge and understanding of scientific ideas and scientific techniques and procedures.
AO1.1	Demonstrate knowledge and understanding of scientific ideas.
AO1.2	Demonstrate knowledge and understanding of scientific techniques and procedures.
AO2	Apply knowledge and understanding of scientific ideas and scientific enquiry, techniques and procedures.
AO2.1	Apply knowledge and understanding of scientific ideas.
AO2.2	Apply knowledge and understanding of scientific enquiry, techniques and procedures.
AO3	Analyse information and ideas to interpret and evaluate, make judgements and draw conclusions and develop and improve experimental procedures.
AO3.1	Analyse information and ideas to interpret and evaluate.
AO3.1a	Analyse information and ideas to interpret.
AO3.1b	Analyse information and ideas to evaluate.
AO3.2	Analyse information and ideas to make judgements and draw conclusions.
AO3.2a	Analyse information and ideas to make judgements.
AO3.2b	Analyse information and ideas to draw conclusions.
AO3.3	Analyse information and ideas to develop and improve experimental procedures.
AO3.3a	Analyse information and ideas to develop experimental procedures.
AO3.3b	Analyse information and ideas to improve experimental procedures.

C	Questi	ion	Answer	Marks	AO element	Guidance
1	(a)	(i)	pH is 1.0 at the start and ~12.5 at the end / pH increases slowly up to 20cm³ / for last 20cm³.√ changes suddenly when 25 cm³ sodium hydroxide is added / when pH reaches 4 √	2	2.2	IGNORE: pH Increases (without any numbers) If no other marks scored, ALLOW 'pH increases' with two correct points from graph for one mark
		(ii)	(sulfuric) acid has a low pH / 1 - 6 \(\) Alkali / sodium hydroxide has a high pH / 8 - 14 \(\)	2	1.2	ALLOW high concentration of H ⁺ ions in acid.
	(b)	(i)	2 (NaOH) 2 (H ₂ O) ✓	1	2.1	
		(ii)	Substance Formula water NaOH sodium sulfate H ₂ SO ₄ sulfuric acid Na ₂ SO ₄ sodium hydroxide H ₂ O	2	1.1	All correct = 2 marks Two or three correct = 1 mark
	(c)	(i)	hydroxide (ions) ✓ H ⁺ ✓ H ₂ O ✓	2	1.1	All correct = 2 marks One or two correct = 1mark DO NOT ALLOW: H ² O etc.
		(ii)	Neutralisation ✓	1	1.1	

C	Question		Answer	Marks	AO element	Guidance	
2	(a)		H CI C=C H H ,	2	2.1	DO NOT ALLOW: CL FOR Cℓ	
	(b)		Four single C-H bonds <u>and</u> bonds coming out from brackets ✓ Single C-C bond between C atoms ✓	2	1.2		
	(c)	(i)	FIRST CHECK THE ANSWER ON ANSWER LINE If answer = 42 award 2 marks Uses correct masses: (C =) 12 and (H =) 1 (12 × 3) + (1 × 6) = 42 (12 × 3) + (1 × 6) = 42 (12 × 3) + (1 × 6) = 42 (12 × 3) + (1 × 6) = 42 (13 × 3) + (1 × 6) = 42 (14 × 6) = 42 (15 × 6) = 42 (15 × 6) = 42 (16 × 7) + (16 ×	2	2.2		
		(ii)	(11200/28) = 400 ✓	1	2.2		

Q	Question		Answer					Marks	AO element	Guidance
3	(a)		carbon dioxide	, ✓				1	1.2	
	(b)		Substance	Raw Material	Product	Waste		2	1.2	All correct = 2 marks 2-4 correct = 1 mark
			copper carbonate	√						1 correct = 0 marks
			gas X			✓				
			carbon	✓						
			water and impurities			√				
			copper		✓					
	(c)	(i)	as mass of copincreases / quotas mass of copincoping doubles / quotas / quot	otes values of the per carbonal es values to	to show this ate doubles, show this ✓	mass of co	pper	2	2.2	As mass of copper carbonate doubles, mass of copper doubles = 2 marks (mark point 2 subsumes mark point 1) ALLOW: straight line graph through the origin for 2 marks ALLOW: mass is (about) twice the yield with data for 2 marks IGNORE: "Increases evenly" IGNORE: "positive correlation"
		(ii)	If no copper ca	arbonate is u	ised, no cop	per is made	. ✓	1	2.2	DO NOT ALLOW: reverse argument
		(iii)	29.0 (g) 🗸					1	2.2	ALLOW 28-30 inclusive (± ½ square)
		(iv)	She did not dr	y the copper	at the end.	✓		2	3.3b	
			Her copper co							
	(d)		Nina is correct (compared to			18.0 g of c	opper	2	3.2a	
			Kai is correct l Kai's actual yie							

C	uestio	n Answer	Marks	AO element	Guidance	
4	(a)	(aq) for KI and KCI ✓		2.1		
	(b)	chlorine + potassium iodide → iodine and potassium chloride√	1	2.1		
	(c)	iodine (in solution) is brown / identifies iodine √	1	1.2		
	(d)			2.2 1.1 1.1	All four correct = 3 marks three correct = 2 marks two correct = 1 marks one correct = 0 marks	

Que	Question		Answer	Marks	AO element	Guidance	
5	(a)		< 1	2	2.1	All three correct = 2 marks 2 or 1 correct = 1 mark	
			~ ✓			ALLOW: '>' for second statement	
			> ✓				
	(b)	(i)	liquid ✓	1	2.1		
		(ii)	room temperature / 20°C is above melting point / -39°C√	2	2.1	ALLOW: 1 mark only for 'it has already melted' ALLOW: Room temperature is between melting and boiling point for 2 marks	
			room temperature / 20°C is below boiling point / 357°C√				
	(c)		Transition metals are good catalysts✓ Zinc does not form coloured compounds. ✓	2	1.1		

(Question		Answer		AO element	Guidance
6	(a)		reaction is exothermic ✓ gives out heat ✓	2	2.1	
	(b)		Any two from: ammonium sulfate powder / dry / solid is made ✓ other process(es) make (ammonium sulfate) solution ✓ fertiliser needs to be a solid to be sold ✓	2	2.1	
	(c)		Any two from: both processes 1 and 2 have higher atom economies than process 3 ✓ in processes 1 and/or 2 all the atoms are used (to make the product) / only the product is made ✓ process 3 has a waste product / makes CaCO₃ as well / has a different equation ✓	2	2.1	IGNORE: Processes 1 & 2 have 100% atom economy.
	(d)	(i)	filtration ✓ evaporation ✓	2	2.2	
		(i)	batch is small scale / does reaction in a container / idea of complete reaction finishing / fixed amount ✓ continuous goes on all the time / idea that reactants keep being added and products keep being removed ✓	2	1.1	

Level 3 (5–6 marks) Uses ideas about particles to make a statement about what happens when solids melt: **Particles gain energy** **particles gain energy** **particles gain energy** **particles move more/move faster (IGNORE move apart spread out)* **particles move over each other move apart spread out)* **particles move over each outher move apart spread out)* **particles move over each outher move apart spread out)* **particles move over each outher move apart spread out)* **particles move outher move apart spread out)* **particles move outher move apart spread out)* **particles move more/move facter (IGNORE move apart spread out)* **particles move more/move facter (IGNORE move apart spread out)* **particles move apart spread out)* **particles m	Question	Answer	Marks	AO element	Guidance
IGNORE 'water has weaker bonds than salt'.	7*	Level 3 (5–6 marks) Uses ideas about particles to make a statement about what happens when solids melt AND why heating causes melting AND why the melting points are different. There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated. Level 2 (3–4 marks) Uses ideas about particles to make statements about either what happens when solids melt OR why heating causes melting OR why the melting points are different. There is a line of reasoning presented with some structure. The information presented is relevant and supported by some evidence. Level 1 (1–2 marks) Uses ideas about particles to make a correct statement about the diagrams. There is an attempt at a logical structure with a line of reasoning. The information is in the most part relevant. O marks	6		interpretation of data and diagrams in question uses the model to explain what happens when solids melt: • particles gain energy • particles move more/move faster (IGNORE 'move apart' 'spread out') • particles move over each other • particles leave their regular arrangement AO2.1/AO3.1a Application of knowledge and interpretation of data and diagrams in question Uses the model to explain why heating causes melting: • forces between particles in solid are broken / overcome • heating breaks bonds AO2.1/AO3.1a Application of knowledge and interpretation of data and diagrams in question Uses the model to explain why ice and salt have different melting points: • forces between water molecules are weaker (than the forces between particles in sodium chloride/salt) ORA • ice has weaker (intermolecular) bonds than salt sodium chloride/salt is an ionic solid (with strong bonds) • water / ice is a covalent compound (with weak forces between molecules).

Q	uesti	on	Answe	er		Marks	AO element	Guidance
8	(a)	(i)				2	2x2.2	
		(ii)			2	2x3.2a	IGNORE: 'bigger effect (on environment').	
	(b)	(i)	Statement For each gas the concentration remained approximately constant for 1500 years. The concentration of methane is usually higher than the concentration of nitrous oxides. The concentration of carbon dioxide is measured in ppb. The concentration of all three gases has more than doubled since 1500 years ago.	True (✓)	False (√)	3	3 x 3.1a	All four correct = 3 marks three correct = 2 marks two or one correct = 1 mark
		(ii)	(yes) overall pattern is the same / all this levels (for a long time) / all three h (since ~1800)√ small up and down variations do r	nave increase	d sharply	2	2x3.1b	If "No" is ticked but a correct explanation is given, award 1 mark.

Question	Answer	Marks	AO element	Guidance
9*	Please refer to the marking instructions on page 4 of this mark scheme for guidance on how to mark this question. Level 3 (5–6 marks) Describes experimental procedure, including safety. AND Gives some expected observations. AND Gives difference in reactivity for all three metals. There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated. Level 2 (3–4 marks) Describes experimental procedure, including safety. AND Gives some expected observations. OR Describes experimental procedure, including safety. AND Gives difference in reactivity for all three metals. There is a line of reasoning presented with some structure. The information presented is relevant and supported by some evidence. Level 1 (1–2 marks) Makes a statement to describe experimental procedure or safety precautions. OR Gives observations. OR Gives difference in reactivity for at least two metals. There is an attempt at a logical structure with a line of reasoning. The information is in the most part relevant. O marks No response or no response worthy of credit.	6	1x1.1 3x 1.2 2 x 3.3a	AO3.3a Analyse information and ideas to develop experimental procedures • (safety) holds metal in tongs / stays behind safety screen • adds (small pieces of) metal to water AO1.2 knowledge and understanding of scientific techniques and procedures to give expected observations • metals fizz • metals move around on water • (some) metals show flame/sparks/alight • heat is given off/water gets hot • metal 'disappears'/ 'dissolves' / is used up • all reactions are fast AO1.1 Knowledge and understanding of difference in reactivity's • order of reactivity is potassium – sodium – lithium / more reactive lower down group 1

Q	Question		Answer	Marks	AO element	Guidance
10	(a)		Any three from:	3	2.2	
			more than one metal ion has green colour / orange colour / same colour ✓			ALLOW two metals linked to a colour/ two metals linked to A or B
			A/green flame colour could be <u>copper or zinc or iron</u> ✓			
			B/orange-red flame colour is (probably) calcium / could be calcium or iron ✓			
			Iron can be many different colours (so difficult to identify) ✓			
			Difficult to tell the difference between some colours (by eye) / colours overlap ✓			IGNORE it could be a mixture IGNORE not all ions are given for
	(b)	(i)	gives a result with acid and with silver nitrate / could be a	1	2.2	reference Result for carbonate is fizzes/CO ₂ given
	(13)	(1)	carbonate or a chloride ✓	•	2.2	off/limewater turns milky <u>and</u> silver nitrate result is white precipitate
						ALLOW correct formulae for ions e.g. CO ₃ ²⁻ /Cl ⁻
						IGNORE 'halide' DO NOT ALLOW chlorine
		(ii)	A: copper and B calcium (no iron or zinc) ✓	3	3.2b	
			chloride in both ✓			DO NOT ALLOW chlorine
			A (only) carbonate ✓			DO NOT ALLOW carbonate mark if additional incorrect anions if more than 2 for A or 1 for B are given

faster / gives a printout / distinct or matching lines / idea that spectrum is unique / does not rely on human eye / does not rely on observations / less (human) error / can identify a mixture of ions / more sensitive / does not rely on human judgment (of colour) ✓ 1.2 IGNORE it is easier/more accurate reliable IGNORE it is easi

Qı	Question		Answer	Marks	AO element	Guidance
11	(a)	(i)	volume = $8 \checkmark$ surface area = $48 \checkmark$ ratio = $(48 \div 8) = 6 \checkmark$	3	2.2	ALLOW ECF
		(ii)	nanoparticles have a higher surface area ✓	2	1.1	ALLOW 1 mark for 'They have a bigger surface area to volume ratio'
			when the same volume is compared √			IGNORE 'they are smaller'
	(b)	(i)	Nanoparticles are (very/much) small(er) ✓	2	1.1	
			Nanoparticles are smaller than holes / can <u>fit</u> through / metal particles are <u>too large</u> to pass through the holes ✓		2.1	IGNORE 'can go through holes'
		(ii)	Any three from: Some risks of nanoparticles are not known ✓ Risk is the same for both / (Risk is different because) socks use nanoparticles outside the body, cancer treatment they are inside ✓ Cancer is life threatening / can cause death / very serious disease ✓ Benefit for treating cancer greater / treating cancer is worth the risk / benefit outweighs risk ✓ Not having smelly feet is not important / not worth the risk / benefit does not outweigh risk ✓	3	3.1b
