Tuesday 15 May 2018 – Afte	ernoon		Paper Reference
Tuesday 15 May 2018 – Afte Time: 1 hour 45 minutes	ernoon		

#### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
   there may be more space than you need.
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must show all your working out with your answer clearly identified at the end of your solution.

### Information

- The total mark for this paper is 100.
- The marks for **each** question are shown in brackets
  - use this as a guide as to how much time to spend on each question.
- In questions marked with an **asterisk** (\*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

#### **Advice**

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

## Answer ALL questions. Write your answers in the spaces provided.

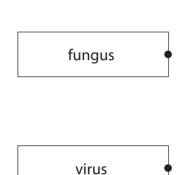

Some questions must be answered with a cross in a box  $\boxtimes$ . If you change your mind about an answer, put a line through the box \( \otimes \) and then mark your new answer with a cross  $\boxtimes$ .

(a) Pathogens cause disease.

Draw one straight line from each type of pathogen to the disease that is caused by that pathogen.

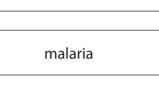

(2)

## type of pathogen

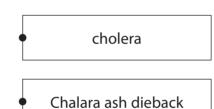

disease

**AIDS** 

(b) Antibiotics can be used to treat diseases.

Antibiotics kill

- antibodies
- antigens
- bacteria
- **D** viruses

**2** Figure 2 shows part of a DNA molecule.

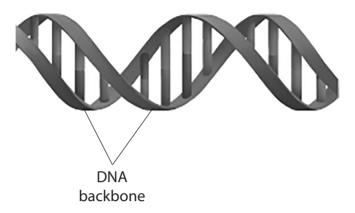

Figure 2

(a) (i) What is the shape of a DNA molecule?

(1)

- A single helix
- **B** double helix
- C complementary helix
- **D** triple helix
- (ii) Which molecules are present in the DNA backbone?

(1)

- A sugars and phosphates
- **B** amino acids and bases
- C sugars and bases
- **D** amino acids and phosphates
- (iii) State the type of bond that joins the bases together in the DNA molecule.

**3** Gregor Mendel investigated genetic inheritance using pea plants.

Figure 3 shows some of the equipment used in this investigation.

(a) (i) Gregor Mendel crossed red-flowered pea plants with white-flowered pea plants.

Describe how this equipment could be used to do this cross and discover the flower colour of the new pea plants produced.

(3)

(ii) Describe how to make sure that the results obtained from this investigation are not anomalous.

(2)

(b) In a different investigation, Mendel crossed pea plants that produced yellow seeds (AA) with pea plants that produced green seeds (aa).

The dominant allele is shown as A.

The Punnett square shows the genotypes of the offspring from this cross.

	A	A
a	Aa	Aa
a	Aa	Aa

Explain a conclusion that can be made from the results of this cross.

(2)

(c) Mendel did his investigations in the 19th century.

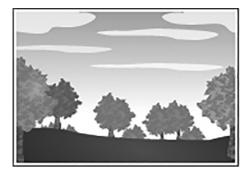

State **one** reason why Mendel could not fully explain the results of his investigations.
