Candidate surname	Other names
Pearson Edexcel Level 1/Level 2 GCSE (9-1) Friday 7 June 20	e Number Candidate Number
Afternoon (Time: 1 hour 10 minutes)	Paper Reference 1SC0/2BH
Combined Science	
Paper 4: Biology 2	Higher Tier
You must have: Calculator, ruler	Total Marks

Instructions

- Use black ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer all questions.
- Answer the questions in the spaces provided
 there may be more space than you need.
- Calculators may be used.
- Any diagrams may NOT be accurately drawn, unless otherwise indicated.
- You must show all your working out with your answer clearly identified at the end of your solution.

Information

- The total mark for this paper is 60.
- The marks for each question are shown in brackets
 use this as a quide as to how much time to spend on each question.
- In questions marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

1/1/1/

Answer ALL questions. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box \boxtimes . If you change your mind about an answer, put a line through the box \boxtimes and then mark your new answer with a cross \boxtimes .

1 (a) A student was investigating the populations of organisms in a garden.

Figure 1 shows the estimates of the number and biomass of some of the organisms in the garden.

organisms	number	mean biomass of each organism in grams	biomass of population in grams
cabbages (plants)	80	70	5600
earthworms	620	3.4	?
slugs	30	4.1	123
hedgehogs	1	620	620
squirrels	2	600	1200

Figure 1

(i) Calculate the biomass of the population of earthworms in the garden.

(1)

(ii) Hedgehogs eat slugs and earthworms. Slug pellets were used to kill the slugs.

Explain how killing the slugs would affect the population of earthworms in this garden.

(2)

(iii) Describe a method that could be used to estimate the population of slugs in the garden.	
the garden.	(3)
(b) Explain how cabbages, earthworms and squirrels contribute to the carbon cycle	(3)
(b) Explain now Cabbages, earthworms and squirreis contribute to the Carbon cycle	
(b) Explain now Cabbages, earthworms and squirreis contribute to the Carbon cycle	
(b) Explain now Cabbages, earthworms and squirreis contribute to the Carbon cycle	
(b) Explain now Cabbages, earthworms and squirreis contribute to the Carbon cycle	
(b) Explain now Cabbages, earthworms and squirreis contribute to the Carbon Cycle	
(b) Explain now Cabbages, earthworms and squirreis contribute to the Carbon Cycle	
(b) Explain now Cabbages, earthworms and squirreis contribute to the Carbon cycle	
(Total for Question 1 = 9 n	(3)

(2)

2 (a) A student investigated respiration in three different organisms.

Red hydrogencarbonate indicator was placed in each of three test tubes.

Gauze was placed in each test tube to hold the organisms.

In test tube 1 the student placed four germinating peas.

In test tube 2 the student placed four dried peas.

In test tube 3 the student placed four mealworms.

Bungs were added to each of the test tubes.

The three test tubes were left for one hour.

The equipment used is shown in Figure 2.

Figure 2

(i) State **two** ways this method could be improved to make the results for these three organisms more comparable.

1	 	 	 	 	 	
2	 		 	 	 	

(ii) Describe a suitable control for this investigation.				
	ncarbonate indicator c ioxide is present.	hanges from red to yellow when more		
	•	n are shown in Figure 3.		
	organisms	colour of hydrogencarbonate indicator		
	germinating peas	yellow		
	dried peas	red		
	mealworms	yellow		
		Figure 3		
		ne germinating peas is different from the resul	t for	
the di	ried peas.		(2)	
(ii) How v	was the carbon dioxid	e produced in this investigation?		
⋈ A by	photosynthesis		(1)	
		down in the presence of oxygen		
C w	hen glucose is broken	down in the absence of oxygen		
	the reaction betweer	n oxygen and water		

(c) Explain why cellular respiration is essential for living organisms.	
	(2)
(Total for Question 2 = 9 m	arks)
	MIRJ

BLANK PAGE

3 (a) (i) Water enters a plant through root hair cells.

Root hair cells have

(1)

- **A** a small surface area and thin cell walls
- **B** a small surface area and thick cell walls
- C a large surface area and thin cell walls
- **D** a large surface area and thick cell walls
 - (ii) Explain how water in the root is transported to the leaves of the plant.

(2)

(b) How is sucrose transported from the leaves to other parts of the plant?

(1)

- A by osmosis through the phloem
- B by osmosis through the xylem
- oxdot by translocation through the phloem

(c) Figure 4 shows the average size of stomata in a leaf during one day.

Figure 4

(i) Name the cells that change the size of stomata.

(1)

(ii) Describe the trend shown in Figure 4.

(2)

(iii) The temperature increased from 8 am to 1 pm.

Explain why this affected the size of the stomata.

(2)

(Total for Question 3 = 9 marks)

4	(a) (i)	Women with the condition known as polycystic ovary syndrome (PCOS) do not ovulate regularly.	
		Women with PCOS can be treated using clomifene therapy.	
		Clomifene therapy stimulates the production of FSH.	
		Name the endocrine gland that produces FSH.	(1)
	(ii) During this therapy, a woman takes a clomifene tablet each day for the first fiv of her menstrual cycle.	e days
		Describe the changes that would happen inside the ovaries during the first five days of this treatment.	
			(2)

(iii) Which hormone causes ovulation?

(1)

- 🗵 A LH
- **B** FSH
- **C** testosterone
- **D** progesterone
- (iv) During clomifene therapy, the woman has a blood test on day 20 of the menstrual cycle.

The blood test shows a high level of progesterone.

Explain the cause of this high level of progesterone on day 20 of the menstrual cycle.

(2)

(b)	Hormones are also used as a method of contraception.	
	Explain why taking high levels of oestrogen and progesterone in the combined contraceptive pill reduces the chance of pregnancy.	(2)
(c)	The female population of Britain is 32.6 million.	
	The percentage of this population taking the combined contraceptive pill is 13.2%.	
	The combined pill is 98.8% effective.	
	Calculate the maximum number of females taking the combined contraceptive pill who could become pregnant.	
		(3)
	(Total for Question 4 = 11 mar	ks)

5 (a) Figure 5 shows the stroke volume at different heart rates of a person who has trained for a marathon and of a person who has not trained for a marathon.

Figure 5

(i) Compare the effect of heart rate on stroke volume of the person who has trained for a marathon with the person who has not trained for a marathon.

(2)

(ii) Calculate the cardiac output for the person who has trained for a marathon when the heart rate is 160 beats per minute.

Give the units in your answer.

(3)

*(b) Blood from the body enters the heart through the vena cava.		
Describe how this blood flows through the heart and lungs to leave the heart through the aorta.		
Include references to the chambers of the heart and the relevant valves in your answer. (6)		
	•••••	
(Total for Question 5 = 11 marks)		

6 (a) Figure 6 shows the global movement of carbon into or out of the atmosphere.

process	movement of carbon into or out of the atmosphere in gigatonnes per year
photosynthesis	120.1
respiration	119.6
ocean uptake	92.8
ocean loss	90.0
combustion of fossil fuels	6.4

Figure 6

Calculate the net mass of carbon added to the atmosphere each year.

(2)

gigatonnes

(b) Joseph Priestley was a scientist who investigated how green plants and combustion affected the carbon cycle.

Figure 7 shows his first experiment.

candle sealed in a bell jar

candle after 3 minutes

Figure 7

(i) State why the candle was not burning after three minutes.

(1)

(ii) Joseph Priestley continued the investigation but placed a plant inside the bell jar as shown in Figure 8.

Figure 8

He observed that the candle stayed alight for two minutes more than the candle in the bell jar in the first experiment.

Explain his observation.

(2)

(iii) State two variable	s that would need to be	controlled to compare these tw	o experiments.
1			
2			
(c) Nitrogen is cycled thro	ough the environment		
	pacteria in the nitrogen c	ycle.	(4)
