Advanced Subsidiary	
Paper 2: Core Organic and Physical Chemistry	
Candidates must have: Scientific calculator Data Booklet Ruler	
Total Marks	

Instructions

- Use **black** ink or **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- For the question marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically showing the points that you make are related or follow on from each other where appropriate.
- A Periodic Table is printed on the back cover of this paper.

Advice

- Read each question carefully before you start to answer it.
- Show all your working in calculations and include units where appropriate.
- Check your answers if you have time at the end.

Pearson

Answer ALL questions.

Some questions must be answered with a cross in a box ☒.
If you change your mind about an answer, put a line through the box ☒
and then mark your new answer with a cross ☒.

1 Some alkanes are used as fuels for transport. Crude oil, which is a mixture of hydrocarbons, is the major source of these alkanes. Crude oil is processed by fractional distillation, cracking and reforming.

(a) Fractional distillation produces fractions which contain molecules of a similar boiling temperature. Molecules containing six carbon atoms are found in both the petrol fraction and the higher boiling kerosene fraction.

(i) Identify, by name or structural formula, the unbranched alkane with six carbon atoms found in kerosene.

(1)

(ii) Explain why **isomers** of the alkane in (a)(i) have lower boiling temperatures and so are found in the petrol fraction.

(3)

(b) During cracking, carbon to carbon bonds are broken.

Explain the **two** major reasons for cracking hydrocarbons.

(3)

(c) Which of the following changes to the proportions of organic molecules within a fraction results from the reforming process?

(1)

	Proportion of branched chain alkanes	Proportion of cyclic hydrocarbons
☐ A	decrease	decrease
☐ B	decrease	increase
☐ C	increase	decrease
☐ D	increase	increase

(Total for Question 1 = 8 marks)

2 This question is about organic compounds.

(a) Organic compounds can be grouped together in homologous series.

(i) Describe **two** characteristics of a homologous series.

(2)

(ii) Name the homologous series to which propene belongs.

(1)

(b) Propene can be converted into a mixture of 1-chloropropane and 2-chloropropane, in which 2-chloropropane is the major product.

(i) Give the reagent required for this reaction.

(1)

(ii) What is the type and mechanism of the reaction in (b)(i)?

(1)

- ☐ A electrophilic addition
- ☐ B nucleophilic addition
- ☐ C electrophilic substitution
- ☐ D nucleophilic substitution

(c) 1-chloropropane and 2-chloropropane can be converted into compounds containing the nitrile functional group.

- (i) Under appropriate conditions, 1-chloropropane can be converted into butanenitrile, $\text{CH}_3\text{CH}_2\text{CH}_2\text{CN}$.

Which is the reagent for this conversion?

(1)

- ☐ A ammonia
- ☐ B nitric acid
- ☐ C potassium cyanide
- ☐ D silver nitrate

- (ii) Under appropriate conditions, 2-chloropropane can be converted into a structural isomer of butanenitrile.

State what is meant by the term 'structural isomer'.

(2)

.....

.....

.....

.....

- (iii) Give the displayed formula **and** systematic name of the isomer of butanenitrile formed in (c)(ii). You must show **all** the bonds.

(2)

Displayed formula

Name

.....

(Total for Question 2 = 10 marks)

.....

3 This question is about enthalpy changes.

(a) (i) State what is meant by the term 'standard enthalpy change of combustion'.

(2)

.....

.....

.....

.....

(ii) Write the equation, including state symbols, for the reaction that occurs when the standard enthalpy change of combustion of octane, $C_8H_{18}(l)$, is measured.

(2)

(iii) The standard enthalpy change of combustion of octane is $-5470 \text{ kJ mol}^{-1}$.

Complete the reaction profile diagram for the combustion of octane. Include labels showing the standard enthalpy change of combustion, $\Delta_c H^\ominus$, and the activation energy, E_a .

(2)

DO NOT WRITE IN THIS AREA

- (b) Enthalpy changes of reactions which cannot be measured directly can be calculated using standard enthalpy changes of combustion.
The table shows some of these values.

Substance	$\Delta_c H^\ominus / \text{kJ mol}^{-1}$
C(s)	-394
H ₂ (g)	-286
CH ₄ (g)	-890

Complete the Hess cycle and use it to calculate the standard enthalpy change for the following reaction.

(4)

--

- (c) The equations for the combination of gaseous atoms of carbon and hydrogen to form methane, CH_4 , and propane, C_3H_8 , are

Calculate:

- (i) the mean bond enthalpy of a C—H bond.

(1)

- (ii) the mean bond enthalpy of a C—C bond.

(2)

- 5 Bromobutanes react with hot ethanolic potassium hydroxide solution to produce gaseous butenes.

Apparatus

Procedure

- 0.0080 mol of liquid 1-bromobutane was injected into a round bottom flask containing hot ethanolic potassium hydroxide.
- After the reaction, the syringe was sealed using a clamp.
- The syringe was then removed from the apparatus and allowed to cool to room temperature (298 K).

Result

The final volume of but-1-ene collected was 22.0 cm³.

- (a) State the purpose of the condenser.

(b) Describe a chemical test on the gas in the syringe to identify its functional group.

Include the expected result.

(2)

.....

.....

.....

.....

.....

.....

(c) Calculate the percentage of 1-bromobutane which was converted to but-1-ene.

[Molar volume of a gas at r.t.p. = $24\,000\text{ cm}^3\text{ mol}^{-1}$]

(2)

(d) Before cooling, the volume of but-1-ene in the gas syringe was 24.0 cm^3 .

Calculate the temperature of the gas in the syringe before it cooled.

[Assume no loss from the gas syringe during cooling, and a constant pressure]

(2)

- (e) (i) Another compound formed from 1-bromobutane under these conditions is butan-1-ol.
Identify the type of reaction taking place to form butan-1-ol.

(1)

- (ii) The functional group in butan-1-ol can be confirmed using a single chemical test.
What is the single chemical test and expected observation?

(1)

	Chemical test reagent	Observation
☐ A	sodium carbonate solution	effervescence
☐ B	aqueous silver nitrate	cream precipitate
☐ C	Fehling's solution	red precipitate
☐ D	phosphorus(V) chloride	steamy fumes

- (iii) Draw the mechanism for the reaction of 1-bromobutane with hydroxide ions to form butan-1-ol.

Include curly arrows, and any appropriate lone pairs and dipoles.

(3)

(f) Alkene molecules are formed by elimination from 2-bromobutane.

How many isomeric alkene products will be formed in this reaction?

(1)

- ☐ A 1
- ☐ B 2
- ☐ C 3
- ☐ D 4

6 Wine and gin are aqueous solutions of ethanol with traces of other organic compounds which give these drinks their characteristic flavours and aromas.

(a) When a bottle of wine is opened, oxidation of the ethanol in the wine produces ethanoic acid.

An experiment was carried out to determine the percentage of the ethanol that had been oxidised.

- A bottle of white wine, with an ethanol concentration of 2.50 mol dm^{-3} , was opened and left to stand at room temperature for three weeks.
- A 25.0 cm^3 sample of the wine was transferred to a conical flask and phenolphthalein indicator added.
- Aqueous sodium hydroxide of concentration $0.235 \text{ mol dm}^{-3}$ was added from a burette until the colour of the indicator permanently changed.
- The titration was repeated and the titre values, in cm^3 , were 27.90, 26.75 and 26.85.

The equation for the neutralisation reaction is

(i) Name the piece of apparatus used to measure 25.0 cm^3 of wine.

(1)

(ii) To improve the accuracy, the burette should be rinsed.

State what should be used.

(1)

(iii) What is the colour change at the end-point?

(1)

- ☐ A from orange to yellow
- ☐ B from red to orange
- ☐ C from colourless to pink
- ☐ D from pink to colourless

- (b) The ethanol content of alcoholic drinks is usually measured as the percentage of alcohol by volume (ABV).

$$\text{ABV} = \frac{\text{Volume of ethanol in a solution}}{\text{Total volume of the solution}} \times 100$$

The ABV values of four different brands of gin are shown.

Brand of gin	ABV (%)
A	40
B	42
C	44
D	46

A sample of one of these gins was found to contain an ethanol concentration of 7.50 mol dm^{-3} .

By calculating the percentage of ethanol by volume (ABV) of this sample, deduce the brand of this gin.

[Assume the density of ethanol, $\text{C}_2\text{H}_5\text{OH} = 0.79 \text{ g cm}^{-3}$]

7 This question is about compounds with the molecular formula C_4H_8O .

(a) What is the percentage by mass of each element in C_4H_8O ?

(1)

	Percentage carbon	Percentage hydrogen	Percentage oxygen
☐ A	66.67	11.11	22.22
☐ B	60.00	20.00	20.00
☐ C	41.38	3.45	55.17
☐ D	30.77	61.54	7.69

*(b) Three different compounds, **A**, **B** and **C**, have the molecular formula C_4H_8O .

Information about these three compounds includes:

- all three compounds have infrared absorptions at about 3500 cm^{-1}
- the infrared spectra of **A** and **B** each contain a peak at about 1650 cm^{-1} , while that of **C** does not
- only **A** has a branched carbon chain
- **B** is the *E*-isomer of a pair of stereoisomers.

Deduce a possible **displayed** formula for each of the compounds **A**, **B** and **C**.

You must use **all** the information and the Data Booklet to fully justify each of your structures.

(Total for Question 7 = 7 marks)

- 8 Compound **X** reacts slowly with water according to the following equation.

The reaction is catalysed by hydrogen ions and eventually goes to completion.

Compound **X** was added to water and the concentration of compound **Y** determined at various times at a constant temperature.

The results of the experiment are shown.

Time/s	Concentration of Y / mol dm ⁻³
0	0.000
25	0.002
40	0.005
50	0.010
65	0.020
75	0.030
85	0.040
100	0.050
115	0.060
140	0.070
200	0.080
260	0.085
380	0.090

- (a) (i) Complete the graph of concentration against time by adding the six missing points. Draw a line to pass through **all** the points.
