

# Mark Scheme (Results)

Summer 2019

Pearson GCE In Biology (8BN0) Paper 01  
Lifestyle, Transport, Genes and Health

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk) for our BTEC qualifications.

Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

If you have any subject specific questions about this specification that require the help of a subject specialist, you can speak directly to the subject team at Pearson. Their contact details can be found on this link: [www.edexcel.com/teachingservices](http://www.edexcel.com/teachingservices).

You can also use our online Ask the Expert service at [www.edexcel.com/ask](http://www.edexcel.com/ask). You will need an Edexcel username and password to access this service.

### **Pearson: helping people progress, everywhere**

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
- In questions marked with an **asterisk** (\*), marks will be awarded for the ability to structure answers logically showing how the points are related or follow on from each other where appropriate.

| Question Number | Answer                                                                                                                                                                                                                                                                | Mark |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 1(a)(i)         | <p><b>The only correct answer is C polysaccharide</b></p> <p><i>A is incorrect because amylose is not a disaccharide</i></p> <p><i>B is incorrect because amylose is not a monosaccharide</i></p> <p><i>D is incorrect because amylose is not a trisaccharide</i></p> | (1)  |

| Question Number | Answer                                                                                                                                                                                                                                                                                                                          | Mark |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| 1(a)(ii)        | <p><b>The only correct answer is D hydrolysis reaction involving glycosidic bonds</b></p> <p><i>A is incorrect because starch does not contain ester bonds</i></p> <p><i>B is incorrect because starch does not contain ester bonds</i></p> <p><i>C is incorrect because condensation reactions join molecules together</i></p> | (1)  |

| Question Number | Answer                                                                                                                                                                                                                                            | Additional Guidance | Mark |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|------|
| 1 (a)(iii)      | <p>An answer that makes reference to the following:</p> <ul style="list-style-type: none"> <li>amylose is {unbranched / has only 1,4 glycosidic bonds}</li> </ul> <p>OR</p> <p>amylopectin {is branched / has (1,4 and) 1,6 glycosidic bonds}</p> | IGNORE coiled       | (1)  |

| Question Number | Answer                                                                                                                                                                                                                                                                                                                                                                                                | Additional Guidance                                                                                                                                                                                                                                     | Mark |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|

| Level 0 | 0   | No awardable content                                                                                                                                                                                                                                                                                             |                                                                                                                                                                                |
| Level 1 | 1-2 | An answer may be attempted but with limited interpretation or analysis of the scientific information with a focus on mainly just one piece of scientific information. The explanation will contain basic information with some attempt made to link knowledge and understanding to the given context.            | Discussion of how to reduce one risk factor with reference to one of the graphs<br>OR<br>Discussion of how to reduce at least two risk factors without reference to the graphs |
| Level 2 | 3-4 | An answer will be given with occasional evidence of analysis, interpretation and/or evaluation of both pieces of scientific information. The explanation shows some linkages and lines of scientific reasoning with some structure.                                                                              | Discussion of how to reduce two risk factors with reference to two of the graphs<br><br>Demonstrates analysis of data                                                          |
| Level 3 | 5-6 | An answer is made which is supported throughout by sustained application of relevant evidence of analysis, interpretation and/or evaluation of both pieces of scientific information. The explanation shows a well-developed and sustained line of scientific reasoning which is clear and logically structured. | Discussion of how to reduce three risk factors with reference at least two of the graphs.<br><br>Demonstrates analysis of data                                                 |
